2020 Rates Table Template v9.0

*All fields with an asterisk (*) are required. To validate press Validate button or Ctrl + Shift + I. To finalize, press Finalize button or Ctrl + Shift + F.*

If you are in a community rating state, select Family-Tier Rates under Rating Method and fill in all columns.

If you are not in a community rating state, select Age-Based Rates under Rating Method and provide an Individual Rate for every age band.

If Tobacco is Tobacco User/Non-Tobacco User, you must give a rate for Tobacco Use and Non-Tobacco Use.

To add a new sheet, press the Add Sheet button, or Ctrl + Shift + H. All plans must have the same dates on a sheet.

Mrs. Rashmi Mathur,
Pennsylvania Insurance Department
1311 Strawberry Square | Harrisburg, PA 17120

Re: Small Employer Rate Filing for United HealthCare Insurance Company (UHIC)
Pennsylvania SERFF ID# UHLC- 131931939

Dear Mrs. Mathur,

The purpose of this letter and attached supporting documents is to respond to your Objection Letter submitted 6/19/2019.

- In response to question #14 & #23 we have updated Table 10 of the PAAM.
- In response to question #16 we have updated the premium tax to 2% from the initially submitted 1.63%.
- In response to question #19 we have updated the profit to 2% from the initially submitted 3%. The Federal Income Tax was updated accordingly.
- In response to question #21, all references to the statement "The Index Rate for the experience period is approximately 98.4% of allowed claims due to benefits in excess of EHBs" have been removed.
- In response to question #30, we provided the RA User Fee percentage and PMPM amount in cells C54 and D54, respectively. The amount is included in Taxes and Fees.
- In response to question #34, calibrated 2019 PAIR PMPM in Table 10 of PAAM has been updated to reflect the most recent quarterly update filing - approved Q3/4 2019 filing UHLC-131757443

All filing documents were impacted by these changes and were updated accordingly.

Should you have any questions or need any additional information, please contact me at 203-459-7735 or, at Maria_Ilea@uhc.com.

Sincerely,

Maria Ilea

Maria Ilea ASA MAAA
Associate Director Actuarial Services

RE: UnitedHealthcare of Pennsylvania – 2020 Small Group ACA-Compliant Rate Filing
Effective 1/1/2020
SERFF ID #UHLC- 131931939

Dear Mrs. Mathur,
Thank you for your letter reviewing our SERFF filing submission dated 6/18/2019. These are our responses.

1. The updated URR instructions require the quantitative impact of rate increase drivers. Please estimate the impact each of the drivers had on the total rate increase.
Please see exhibit 1 in the objection response workbook or *13 – Avg Annual Change* in the "PA Rate Filing SB_1Q2020 – UHIC – v3" file.

2. What is the quarterly rate increase impact?
Please see exhibit 2 in the objection response workbook. The quarterly rate increase by quarter is as follows:

4Q19 - 1Q20	-0.6%
1Q20 - 2Q20	2.3%
2Q20 - 3Q20	2.3%
3Q20 - 4Q20	2.3%

3. Were any adjustments made to trends due to unexpected large claims?
No. The experience base we're working is large enough that unexpected large claims levels have minimal impact on the ultimate results.

Our trend setting process is outlined by the following narrative. In general, recent/emerging claims experience is reviewed at the market level for several broad medical expense categories (inpatient, professional, pharmacy, etc.), with utilization, unit cost, benefit leveraging, and business mix identified for each category. Depending on the variance of prior historic trends, and the expected trend variance by block size produced through a Monte Carlo model, we evaluate the credibility of a market to set independent trends. In this situation, historic utilization and cost trends for this market are showing a high degree of variance. Therefore, national utilization/mix assumptions along with local contract assessments are being used to produce a more stable and reliable trend estimate.

Unit Cost Projections
Unit cost projections are developed based on evaluations of current and anticipated provider contract economics, as well as consideration to both current and expected changes in non-

contracted provider cost exposure. PA and non-PA market contracts are assessed by service category for PA residents weighted by past services.

Utilization/mix Projections

In determining our projected utilization/mix assumption, we first examine our regional/national historic experience for medical and pharmacy services. In order to eliminate or normalize for business mix issues, our regional experience is limited to accounts that exist in both the prior and current period of experience. We call this a "Same Store" assessment. The change in allowed cost is adjusted for demographics, working day differences, and other minor issues. Our estimated regional/national unit cost is subtracted from this total to determine a regional historic utilization/mix trend. In order to develop our forward looking utilization/mix component, we must now assess the expected changes that will occur from administrative initiatives, provider contracting, economic conditions, environmental impact, policy provisions, regulatory change, and technological advancements. Given the complexity of some of these estimates, many of the expected changes are applied uniformly across all service categories. The aggregate utilization mix change is determined and then applied at the service level to create our service level splits. Given the variation in service level trends, aggregate medical and pharmacy projected trends are developed and service level splits are then formulated based on proportional historical experience.

Benefit Leveraging

Our final step is to determine a trend estimate for benefit leveraging. Since our analysis is based on allowed cost differences, we must also include a component that recognizes the benefit leveraging impact from fixed deductibles, copays, and stop loss limits. This process simulates a future net trend calculation using actual cost sharing components at each service level. By inflating the various cost sharing components based on our perspective trend assumptions, while keeping the same anticipated membership and benefit structure, a simulated next calendar year is produced. The simulated net claims to allowed changes are compared to produce an implied benefit leveraging estimate.
These components are then aggregated to derive our final expected trend numbers.

4. Please provide the development of the 0.6% additional trend adjustment.
Please see exhibit 4 in the objection response workbook or *9 – Single Risk Pool Adj Fctrs* in the "PA Rate Filing SB_1Q2020 – UHIC – v3" file.

5. Please explain the 0.7% additional other adjustment on page 9 of the Part III memorandum represents and provide quantitative support for this adjustment.
Please see exhibit 5 in the objection response workbook or *9 – Single Risk Pool Adj Fctrs* in the "PA Rate Filing SB_1Q2020 – UHIC – v3" file.

The 2.0% other adjustment is comprised of the 2.65% for PPACA and a -0.6% balancing item.

6. The trend included in Table 5A of the PAAM seems to be developed from 6 – Pricing Trend in the PA Rate Filing SB_1Q2020 file, however, please explain why the unit cost trend in this workbook does not match the pricing trend shown in Table 3 of the PAAM.
The trends in Table 3 of the PAAM are claims trends; therefore, they match to the unit cost trends from *17 – Claims Trend Summary* and not from *6 – Pricing Trend*.

7. Please explain why the PA RATEE risk adjustment payment estimate of $10,425,382 for 2018 was not used.
RATEE results from PA became available on 05/08/2019. Rate filings are due on 05/21/2019, and our rate filing was submitted on 05/20/2019. Pricing assumptions for the rate filing were finalized long before RATEE information became available. Updated risk adjustment information may be included in the rate filing as soon as the final CMS data becomes available.

8. Please provide quantitative support for items g-j in the risk adjustment formula provided in Tab 15 of the PA Rate Filing SB.
Items g-j in Tab 15 are based on results from the 201812 Wakely National Risk Adjustment Reporting (WNRAR) project. The data underlying that version of the study is January 2018 through December 2018 with no run-out. A completion estimate is applied to risk scores in the exhibit, but our scores are assumed to complete in a manner similar to the state average. When we use WNRAR values in states with low membership or low WNRAR participation, we apply a credibility adjustment to the results. The adjustment is typically applied to the final transfer percentage, but it is included in our risk score in Tab 15 in order for the final transfer percentage to match our assumption.

9. Please explain why the state average premium of $503.24 in Tab 15 of the PA Rate Filing SB is so much higher than the average monthly premium of $442.74 calculated by PA in the RATEE file.
The $442.74 value calculated by PA in the RATEE file presumably includes the 14% administrative cost adjustment to the state average premium. This adjustment is applied in line l in Tab 15. The resulting adjusted premium is 2% less than the value calculated by PA in the RATEE file, and that remaining difference is likely a result of issuers not participating in the WNRAR project.

10. Please confirm that Risk Adjustment Data Validation adjustments were not included in the risk adjustment.
The risk adjustment assumption contains no provision for Risk Adjustment Data Validation.

11. The projected risk adjustment in the URRT (WS1 (on allowed basis when adjusted by paid-to-allowed) and WS2 (on paid basis) do not match the PAAM Table 10 (on paid basis). The PA Rate Filing SB matches the URRT WS1. Please correct the materials that are incorrect.
The projected risk adjustment in Worksheet 1 URRT is on allowed basis and should be grossed up by the paid to allowed factor if it is on a paid basis. Current projected risk adjustment in Worksheet 1 URRT is $24.92 (allowed basis), and paid to allowed factor is 0.804. Multiplying the two will bring the risk adjustment to a paid basis: $24.92 * 0.804 = $20.04. Worksheet 1 URRT and PA Rate Filing SB both show risk adjustment on an allowed basis, which is $24.92, while Worksheet 2 URRT and PAAM Table 10 both show risk adjustment on a paid basis.

12. Regarding the induced utilization support provided in the PA Rate Filing SB on Tab 10 – Induced Util tab, please explain the large range of paid to allowed ratios for each metal level, particularly the gold tier which ranges from 0.67 to 0.92.
Please see exhibit 12 in the objection response workbook for a side by side comparison of the two gold plans you referenced in your question. As you can see, there is a big difference between the benefit descriptions for each plan also reflected in the AV value assigned to each plan. UnitedHealthcare has a proprietary pricing model that was used in developing the actuarial value and cost sharing adjustment for each plan. The model calculates plan relativity factors for medical and pharmacy benefits. Also included under the actuarial value and cost sharing adjustment are adjustments for leveraging and the difference between the average plan relativity factor and the projected paid to allowed ratio.

13. Regarding the induced utilization support provided in the PA Rate Filing SB on Tab 10 – Induced Util tab, please provide quantitative support for the development of the AVCS adjustments by plan.
Please see exhibit 13 in the objection response workbook (Column H) or *11 – AVCS Calc* in the "PA Rate Filing SB_1Q2020 – UHIC – v3" file (Column I).

14. The induced demand in Table 10 of the PAAM is not completely normalized. Please correct.
This has been corrected, please see the updated PAAM file.

15. Please explain what non-EHB benefits are included in the benefit plans and provide quantitative support for the 1.6% adjustment.

Therapy - (Physical, Aquatic, etc.)	54%
Speech/hearing Therapy, hearing aids, eye exam	27%
Acupuncture, orthotics	10%
Other	9%

16. Please show how the premium tax of 1.63% was developed.
The correct premium tax should be 2.0% and we have replaced the 1.63% with the 2.0% in all of the filing exhibits.

17. Please provide quantitative support for the development of the 2.65% health insurance providers fee and include all the data and assumptions used such as market share. Provide the actual paid HIT fees on a PMPM and percent of premium for calendar years 2018 and 2016.
Please see exhibit 17 in the objection response workbook.

The ACA stipulates statutory amounts to be collected for the insurer fee for 2014-2018 and states that the changes in fees to be collected in following years will be tied to premium growth. The fees are assessed to insurance companies based on earned health insurance premiums, with certain exclusions. This is referred to below as Net premiums.

Because the fee is not tax deductible, insurers need to gross up the fee for state and federal income tax. Our analysis assumes a 37% gross up percentage (35% federal tax + 2% average state tax) through 2017, and 22.75% (21% federal tax + 1.75% average state tax) for 2018+. The average state tax values came from the finance area.

Net premiums is a key piece of information that needs to be estimated to come up with an insurer fee percentage estimate. United engaged several independent actuarial consulting companies to develop estimates of net premiums and insurer fee percentages, including Oliver Wyman and Wakely Consulting. Over time, Wyman has developed several updates/supplements to its initial analysis, and their write-ups have been released publically.

The net premiums estimates underlying our pricing estimate for the insurer fee start with Wyman's net premium estimates from their 11/3/14 report (which went through only 2015) and extend them to future years using changes in net premiums from Wyman's 10/26/12 report. We included an adjustment for the 2019 fee moratorium.

For each year, our insurer fee percentage estimate reflects the grossed up fee amount divided by the prior year's net premium estimate, since the statute specifies that the prior year's net premiums will be used to allocate fee amounts across insurers. The 2018 percentage becomes a steady state figure for 2019 (prior to moratorium effect) and beyond due to the statutory provision that fee increases for 2019+ will increase proportionately with premium increases.

Results
The result of the analysis for 2020 is an insurer fee estimate of 2.65%.

18. What is included in the $0.35 All Other Taxes & Fees included on tab 18 – MLR in the A Rate Filing SB?
Please see exhibit 18 in the objection response workbook.

19. PA will permit a maximum profit margin of 2%. Please update materials to reduce the profit margin from 3%.
Profit margin is reduced to 2%.

20. Please explain what is expected to drive the projected increase in membership from current to 2020 and shift in enrollment by plan designs.
We have developed plan designs that our sales team thinks will be more competitive in the market place which results in a projected increase in membership from current to 2020. The projected membership distribution by metal level matches the experience period.

The following additional questions or comments are from PID.

21. The experience Index Rate excludes the Non-EHB claims component of allowed claims. Please see formula in cell L37 of Table 2 of PAAM. Please remove all references to the statement "The Index Rate for the experience period is approximately 98.4% of allowed claims due to benefits in excess of EHBs" from both of your PA and Federal Actuarial Memoranda. Please explain if you do not agree.
All references to the statement above have been removed from the PA and Federal Actuarial Memoranda.

22. Paid-to-Allowed Ratio - Please use only column K of Table 10 of PAAM and the projected membership to calculate the Paid-to-allowed ratio. The calculation results in a factor of 0.8059. This matches the paid-to-allowed factor in cell F63 of "Tab 10-Induced Util" of your Support workbook.
Column K is populated with the Pricing AV factors and the weighted average of these factors using projected membership is 0.804 which represents the paid to allowed ratio.

23. Benefit Richness Factor – The factors in column L of Table 10 of PAAM must be normalized and cell L15 should be 1.
This has been corrected, please see the updated PAAM file.

24. Federal Income Tax – Please document the calculation of the Fit. Please refer to the PA Rate Filing Guidance since the corporate tax rate is 21% on the profit component.
The filing assumes profit before taxes of 2.5% applying 21% FIT the profit after taxes becomes 2.0%. This results in 0.5% in Federal Income Tax as shown below.

Premium Taxes and Fees Allocation	Estimated % of Premium
Federal / State Income Tax on Profit & Risk Load	0.5%
Premium Tax	2.0%
ACA Taxes: Insurer Fee	2.7%
ACA Taxes: PCORI Fee	0.0%
ACA Taxes: Risk Adjustment User Fee	0.0%
ACA Taxes: Exchange User Fee	0.0%
All Other Taxes & Fees	0.1%
Total	**5.3%**

25. Please provide an exhibit that shows, by HIOS Plan ID, summary benefit and cost sharing changes for 2020 relative to the 2019 design for all plans to be offered in 2020. Include Pricing AV columns for 2019 and 2020. Please show the approved 2019 Pricing AVs for all plans in the 2019 column and the proposed 2020 Pricing AVs in the 2020 column.
Please see exhibit 25 in the objection response workbook.

26. Risk Adjustment Data Validation process (RADV) -
a) Please describe any adjustments or considerations made due to the Risk Adjustment Data Validation process (RADV).
The risk adjustment assumption contains no provision for Risk Adjustment Data Validation.

b) As you know CMS is performing a risk adjustment validation starting with 2017 risk adjustment data. We are considering allowing an estimate of the impact of risk adjustment modifications in rate filings as an adjustment to the projected risk adjustment. Before implementation, we are soliciting feedback from our issuers on the pros and cons of the inclusion of this adjustment. If allowed, all issuers would be required to submit an estimate. The estimate may be $0. Please provide any feedback that you would like us to consider.
We expect our final RADV error rate to be 0% in PA. The estimated Small Group market error rate in PA is currently 0% (based on CMS published values as of 05/31/2019). We do not expect RADV to have any impact on our risk adjustment estimate in PA.

27. Induced Utilization Exhibit – Tab 10 of Support Workbook.
a) Please confirm that the ratio in Column (9) represents the pure induced utilization for each plan.
We confirm that the ratio in Column (9) represents the pure induced utilization for each plan.

b) Please show quantitatively, including an Excel spreadsheet with formulas, the derivation of the AV and cost sharing factors for each plan. Please note that it is assumed that the AV and cost sharing factor includes the average tobacco factor.
Please see exhibit 13 in the objection response workbook (Column H) or *11 – AVCS Calc* in the "PA Rate Filing SB_1Q2020 – UHIC – v3" file (Column I) for the calculation.

c) Please provide any additional justification for induced utilization assumptions in the Company's pricing.
On an annual basis UHC completes a nationwide SG Slope Analysis. Slope adjustments are intended to create rates that will provide uniform BCR's throughout a range of plan risk sharing

UHC's Induced Utilization Factors (or Induced Demand Factors "IDF") are implied by UHC's Small Group nationwide 2020 pricing slope adjustments. UHC's implied IDF is based on Small Group nationwide projected experience.

Like HHS' induced demand factors, UHC's SG slope method excludes differences due to health status[1] in the plan slope adjustments. The ACA prohibits health status rating therefore cost differences attributed to morbidity are normalized and removed from UHC's slope adjustments using the HHS risk model and risk formula. Removing the effect of risk selection from UHC's SG pricing slope should yield plan relationships that integrate an induced demand utilization component.
Sloped plan relativity averages were compared to unsloped plan relativity average for each metal tier. Each metal tier's average sloped to unsloped relationship was then compared to the Bronze tier's sloped to unsloped relationship for an HHS comparable set of induced demand factors by metal. The nationwide 2020 slope analysis experience base produces an implied IDF.

d) Please confirm that each plan's induced utilization factor was normalized by an aggregate factor, and that the resulting sum product (against 2/1/2019 membership or the projected membership distribution) produces
We confirm that each plan's induced utilization factor was normalized by an aggregate factor calculated using the projected membership distribution.

e) Please quantitatively demonstrate the calculation of the induced calibration factor.
Please see exhibit 27e in the objection response workbook.

f) Please quantitatively show and provide a detailed description as to how the induced demand factor shown in Table 7 relates to the induced utilization factors calculated in the "Induced Utilization Exhibit" shown in the Actuarial Memorandum.
Please see exhibit 27e in the objection response workbook. The induced demand factor shown in Table 7 is the average membership weighted induced demand factors by metallic level.

28. Please provide an exhibit showing the actual experience for calendar years 2014 – 2018 and the projections for 2019 and 2020 for the following categories: Member months, total administrative expenses, total incurred claims, total premium, total actual paid taxes and fees, profit, annual underwriting gain/loss and underwriting gain/loss PMPY. Also show how the financial gains and losses reconciles with the Annual Financial Statements for those periods.
Please see exhibit 28 in the objection response workbook. All of the figures in this exhibit match to the Annual Financial Statements and they reflect the combined ACA and TR experience.

29. Please show the development of the average commission as shown in Table 6. Additionally, the current and 2020 broker agreements should be included and used to develop the percent shown in Table 6 as well as the associated PMPM cost.
Please see exhibit 29 in the objection response workbook.

30. We have repurposed row 54 to capture RA User Fees. Please provide the RA User Fee percentage and PMPM amount in cells C54 and D54, respectively.
This has been updated.

---

31. Please confirm that you have tested to ensure that the rates in Table 11 of the Actuarial Memorandum Exhibits, PA Plan Design Summary and Rate Tables, Federal Rates Template and the binder are identical.
Please see exhibit 31 in the objection response workbook.

While Table 11 produces slightly different rates than the PA PDS, RTT, and the binder, due to rounding, all of the rate exhibits, Federal and state required, are identical.

32. For the expanded Bronze plans, please demonstrate that the copay is less than or equal to 50% coinsurance for that category.
Our portfolio has five expanded Bronze plans. The justification is below.
BRAM is a HSA plan so qualifies as a HDHP.
BIDI is a HSA plan so qualifies as a HDHP.
BIDJ is a HSA plan so qualifies as a HDHP.
BRA2: Generic Rx Copay $15 / Average Unit Cost $51.34 = 29.21% < 50%.
BRBL: Generic Rx Copay $15 / Average Unit Cost $51.34 = 29.21% < 50%.

33. Please provide an exhibit that quantitatively shows a comparison of the actual to projected claim cost PMPMs for calendar years 2015 – 2018, as applicable.
Since we have actual claim costs PMPM for 2015 – 2018 we don't have any projections. Please see exhibit 33 in the objection response workbook for actual ACA only claim costs.

34. Calibrated 2019 PAIR PMPM in Table 10 of PAAM – Please explain the discrepancy in the 2019 PAIR PMPMs of plans between the captioned filing (for 2020 rates) and the most recent quarterly update filing (for 2019 rates). PID has used the approved Q3/4 2019 filing UHLC-131757443.
Calibrated 2019 PAIR PMPM in Table 10 of PAAM has been updated to reflect the most recent quarterly update filing (for 2019 rates - approved Q3/4 2019 filing UHLC- 131757443).

Re: Small Employer Rate Filing for United HealthCare Insurance Company (UHIC)
Pennsylvania SERFF ID# UHLC- 131931939

Dear Mrs. Mathur,

The purpose of this letter and attached supporting documents is to respond to your Objection Letter received on 7/5/2019.

- In response to question #5, we have updated Table 10 of the PAAM.
- In response to question #9, we have updated Table 10 of the PAAM.
- In response to question #10, we have updated our rates to include the risk adjustment results released on June 28, 2019 in this filing. All filing documents have been updated accordingly.
- In reviewing our calculation, we found an error in our formula of cost sharing distribution shift, we have updated the calculation accordingly, which results in a slight change in Paid to Allowed ratio. All filing documents have been updated accordingly.

All filing documents that are impacted by these changes have been updated accordingly.

Should you have any questions or need any additional information, please contact me at 203-459-7735 or, at Maria_Ilea@uhc.com.

Sincerely,

Maria Ilea

Maria Ilea ASA MAAA
Associate Director Actuarial Services

RE: UnitedHealthcare of Pennsylvania – 2020 Small Group ACA-Compliant Rate Filing
Effective 1/1/2020
SERFF ID #UHLC- 131931939

Dear Mrs. Mathur,
Thank you for your letter reviewing our SERFF filing submission dated 7/5/2019. These are our responses.

1. Follow up to Question 5. Please provide additional information into the -.6% balancing item included in the 2.0% other adjustment.
The "Other- BALANCING ITEM" is used to match the discrepancy between URRT development and our final pricing. The Part I Unified Rate Review Template does not demonstrate the process used to develop our rates. Rather, it represents information required by federal regulation to be provided in support of the review of rate increases, for certification of qualified health plans for federally facilitated exchanges, and for certification that the index rate is developed in accordance with federal regulation and used consistently and only adjusted by the allowable modifiers. The "Other –BALANCING ITEM" adjustment is needed to produce rates that are consistent with our rating system.

2. Follow up to Question 13. Please provide a thorough walkthrough of the 11 – AVCS tab of the PA Rate Filing SB_1Q2020 workbook. Please also provide quantitative support for the Relativity column.
Tab 11 – AVCS tab of PA Rate Filing SB_1Q2020 workbook shows a detailed development of Column (8) from Induced Utilization Exhibit (10 – Induced Util tab).

In 11 – AVCS tab,
Column B contains the metallic levels corresponds to each HIOS ID, shown in Column C.
Column F contains projected membership by plan, based on experience period projected member distribution.
Column G contains relativities of each plan.
Column H contains the cost sharing of each plan relative to average relativity of all plans, which is shown in cell C7.
Column I contains calculation on AVCS w/IDF, which is developed from multiplying Column H and paid to allowed ratio, shown in cell C6.

Column I is referenced in Tab 10 – Induced Util as column (8).
Please see objection response workbook tab 2 for quantitative support for the relativity column.

3. Follow up to Question 13. Please explain and provide quantitative support of the Current (704.71) and filed medical manual rate (761.98) field in the 19 – Paid to allowed Ratio tab.
The updated filing now has manual rate (base rate) $774.79. Current manual rate ($704.71) is from recently approved quarterly filing UHLC-131757443. Please see objection response workbook tab 3.

4. Follow up to Question 15. Please provide the full calculation of the 1.6% adjustment, including PMPMs by therapies/acupuncture/other applied to the weights provided in the initial response.
This estimated Non-EHB is 1.6% of claims, please see objection response workbook tab 4 for the estimated PMPM's for the Non-EHB services.

5. Follow-up to question 23: Why are all the factors in column L showing 1? The factors must be taken from Column 9 of Table B as per the PA Rate Filing Guidance and be normalized so that the value in cellL15 shows as 1. (Tab 10 'Induced Util' in your support workbook).
The factors in column L, from our initial submission, were taken from Column 9 of Table B. We then received question 23, from the previous round of objections, and interpreted it to mean the entire column should be hardcoded to 1. However, this is clearly not what you meant in question 23 and the factors in column L have once again been updated to reflect the normalized factors that come from Column 9 of Table B.

We understand that cell L15 of Table 10, within the DOI Exhibits, does not equate to 1 but instead calculates to be 0.996. This is a result of using the 2/1/2019 membership in Column V of Table 10; whereas, we calculate the normalized factors using the projected membership distribution.

Per the PA Rate Filing Guidance, on the topic of "Table B: Induced Utilization Exhibit", it states that column L, of Table 10, should be normalized using the 2/1/19 or the projected membership distribution.

As stated on page 15 in PA Rate Filing Guidance:
"Please note, only Columns L and N should be normalized using the 2/1/2019 or the projected member distribution. Whichever distribution is used, the methodology must be internally consistent and described in the PA Actuarial Memorandum."

Page 15 goes on to say:
"Please confirm that each plan's induced utilization factor was normalized by an aggregate factor, and that the resulting sum product (against 2/1/2019 membership or the projected membership distribution) produces a factor of 1.000. Please show the steps that demonstrate this."

In the first paragraph quoted above it states, *"Whichever distribution is used, the methodology must be internally consistent and described in the PA Actuarial Memorandum."* As we have previously mentioned, we chose to use the projected member distribution; the reasoning is because it is internally consistent with our rate filing.

The table below, which is from tab "11 – AVCS Calc" in the "PA Rate Filing SB_1Q2020 – UHIC – v4" excel file, shows that the resulting sum product (against the projected membership distribution) produces a factor of 1.00; just as the guidance states we must demonstrate in the second quoted excerpt from above.

	IDF	Projected Membership	Normalized
Bronze	1.00	18,847	0.84
Silver	1.08	76,425	0.91
Gold	1.17	155,066	0.99
Platinum	1.30	119,017	1.10
Avg Factor	1.185	369,355	1.00

In section 6, page 1, of PA Rate Filing Guidance it states the following:
"The Table 6 revenue did not include the additional revenue attributable to the silver variant plans; to address this discrepancy, the Department has populated the paid-to-allowed factor field in Table 5 Cell C28 with a formula that auto-calculates projected required revenue based upon entries made in the Plan Pricing AVs, Non-Funding of CSR Adjustment and the Total Covered Mapped Lives as of 2/1/19 (columns, K, P and V, respectively) in Table 10."

Bullet point 11 from section "B. Cover Letter", on page 5, within the PA Rate Filing Guidance states that:
"11. Current number of covered lives and of policyholders as of February 1, 2019 as shown in Cell V15 of Table 10"

This passage from the guidance clearly indicates that the number of covered lives in column V, of Table 10, must be from 2/1/2019. By using these two different membership distributions in conjunction with the normalized factors the resulting sum products could end up being slightly different; in this case Table B column 9 produces a final factor of 1.000 and Table 10 cell L15 produces a factor of .996, which rounded would be 1.0.
See tab 5 of the attached response excel workbook.

6. Follow up to Question 25. The pricing actuarial value changes seem large relative to the description of the benefit plan changes. How did the pricing model change between 2019 and 2020 to produce such large differences?
It is difficult to just compare the AVCS between 2019 and 2020. The AVCS includes plan benefit changes from 2019 to 2020, it includes model changes, and it also includes other factors like Paid to Allowed ratio and cost sharing relative to average relativity of all plans

The pricing model was revised to properly align cost sharing with the underlying cost and utilization patterns of more recent experience. It reflects a current claim distribution and adjusts for the leveraging impact of fixed cost sharing features such as deductibles, copays, and out of pocket maximums. This study is based on national UnitedHealthcare small group experience.

As mentioned in previous responses, the pricing model changes are implemented in a revenue neutral manner, we increase the manual rates (base rates) to offset the average pricing model change. The overall impact of the pricing model change is zero.

7. Follow-up to question 31: the rates on PA Plan Design summary and Rate Tables, Federal Rates Template and the binder must be identical to the rates calculated in Table 11 of the Actuarial memorandum Exhibits.
The rates on PA Plan Design summary, Rate Tables, Federal Rates Template and the binder are accurate and identical to each other. See table 7.1 in objection response workbook tab 7.

The rates in Table 11 of the Actuarial memorandum Exhibits are slightly different due to how the exhibit is built.

The 2020 Unified Rate Review Instructions says "All insurers with single risk pool plans are required to set the index rate for an effective date of January 1 of each year and file the Index Rate with the applicable regulatory authority".

The Projected Index Rates are the same between URRT Worksheet 1 and Actuarial memorandum exhibits Table 5, currently at $523.44.

As stated in page 19 of final CMS URR Instructions, the MAIR should be developed from the index rate that applies for the first quarter.

"The MAIR calculation flows into Worksheet 2 where the allowable plan adjustment factors are applied to determine the PAIR. For annual filings, this should be the Index Rate that applies for the first quarter."

In table 7.2 in objection response workbook tab 7, we allocate all membership in 1/1/2020, the resulting market adjustment index rate would match with the one from URRT Worksheet 1, and appears to be the way the 2020 Unified Rate Review Instructions indicates it should be. This would result in Table 11 rates that are within $0.01 of the rates in the PA Plan Design summary, Rate Tables, Federal Rates Template and the binder. See table 7.3.

In Table 7.4, the current version of Actuarial memorandum exhibits required us to populate the "# of Member Months Renewing in Quarter" in Table 5A, the MAIR in table 5 cell C36 is developed from using "Total Single Risk Pool" cell N33 in Table 5A, which is not the index rate that applies for the first quarter, but a membership weighted index rate for calendar year. This results in a market adjusted index rate calculated on a calendar level, thus the resulting market adjusted index rate does not match the one in URRT. As a result, the market adjusted index rate from Table 5A is $573.09.

Because the MAIR is calculated in Table 11 different than the 2020 Unified Rate Review instructions, we cannot get the rates in table 11 of the Actuarial memorandum Exhibits to match the rates from PA Plan Design summary and Rate tables if we put membership in each quarter of table 11 of the Actuarial memorandum.

The way Table 11 is currently calculated the rates are roughly about $0.40 different.

8. Follow-up to question 33: For the projected claim cost PMPMs you need to look at your historical filings for 2015-2018. The claims cost PMPM projected for each year is what PID is requesting in this question.
Please see objection response workbook tab 8.

9. Follow-up to question 34: The calibrated 2019 PAIR PMPM in Table 10, column Z of PAAM 2020 do not match the calibrated 2019 PAIR PMPM in Table 10, column AZ of the Quarterly Rate filing UHLC-131757443 as per the following examples:

HIOS Plan Id UHLC-131757443 2020 Rate Filing
23489PA10032 $335.48 $342.92
23489PA60051 $446.44 $456.35
23489PA10098 $453.33 $463.39
23489PA10089 $469.86 $480.28

Please input the correct rates for 2019 so that the rate increase can be calculated accurately.
This has been updated in Table 10.

10. If the risk adjustment results released on June 28, 2019 are inconsistent with your projected assumptions, you may modify the risk adjustment transfer amount in Table 5. If such a modification is made, revise all the documents and exhibits impacted and the PA Actuarial Memorandum to discuss this change. This change must be made with your responses due by July 12, 2019.
We have updated the rates to include the risk adjustment results released on June 28, 2019 in this filing.

11. In response to the Department's RADV survey, issuers indicated that they did not include an adjustment in the initial submission, as there was no supportable reason for a RADV adjustment in the 2020 rate submission. Therefore, the Department has determined that there should be no RADV adjustments in the 2020 rate filings; please modify the filing accordingly, if necessary.
We did not make an adjustment for RADV.

Maria Ilea

Projected Index Rate from Table 5	$ 523.44	*Table 5 cell D24*
Market Adjusted Index Rate from Table 5	$ 573.09	*Table 5 cell C36*

CMS URR Instruction: "The MAIR calculation flows into Worksheet 2 where the allowable plan adjustment factors are applied to determine the PAIR. For annual filings, this should be the Index Rate that applies for the first quarter."
$538.29 is not the index rate that applies for the first quarter, but a membership weighted index rate for calendar year.
