

If your organization operates a mobile clinic, the Pennsylvania Department of Health is seeking your input. Please take 5 to 7 minutes to complete a survey about your Mobile Clinic Program.

We envision that all Pennsylvanians have access to trusted, quality health care in their communities. The purpose of this survey is to understand how mobile clinics currently support this vision across Pennsylvania.

The results of this survey will help the Department of Health describe the current breadth of mobile services provided across the state, identify interest in collaboration among mobile service providers to share best practices and identify unmet needs/resources, and to identify opportunities to promote and support the mobile clinics, including opportunities for expansion of services.

Your response to this survey will inform policies, programs, and coalition building.

For this survey, a *mobile clinic is defined as* a customized motor vehicle that travels to communities to provide health care, including medical, dental, behavioral health and substance use services. They may be staffed by physicians, advance practice providers, dentists or dental hygienists, nurses, community health workers, and other health professionals.

Please share this email and the survey link with colleagues that you know or think may operate mobile clinics.
