

BACKGROUND

Dauphin County, Pennsylvania is an urban county with a total combined population of approximately 827,000 people (401,000 males and 426,000 females) from 2016-2018. During those three years, Dauphin County had 125 suicide deaths (99 males and 26 females) at a rate of 15.1 suicide deaths per 100,000 people. The Pennsylvania Violent Death Reporting System (PAVDRS) worked closely with the Bureau of Health Statistics and Registries, the Dauphin County Coroner's Office, and Dauphin County law enforcement to gather detailed information about each violent death. Below are some results of those collaborations.

In Dauphin County, over 3 suicide deaths occurred every month.

The PAVDRS program is a state level surveillance system funded and overseen by the Centers for Disease Control and Prevention (CDC). It is part of the larger National Violent Death Reporting System (NVDRS). There is a Violent Death Reporting System in all 50 states and some US territories. The PAVDRS program collects data on suicides, homicides, deaths of undetermined intent, and accidental firearm deaths. The program is required to collect data directly from death certificates, coroners/medical examiners, and law enforcement. These sources contribute to a comprehensive understanding of each violent death. The program tries to understand what was happening in the victim’s life leading up to their death. PAVDRS/NVDRS data is used for research, policymaking, and, ultimately, to develop violence prevention programs and strategies that will enhance community safety.
