Re: UnitedHealthcare Insurance Company – 2019 Small Group ACA-Compliant Rate Filing

Ms. Cherri Sanders-Jones | Actuary
Pennsylvania Insurance Department
1311 Strawberry Square | Harrisburg, PA 17120

Effective 1/1/2019
SERFF ID# UHLC-131482147

Dear Ms. Sanders-Jones,

Thank you for your letter reviewing our SERFF filing submission dated 6/15/2018. These are our responses.

1. Please reconcile the data in Table 2 with the small group market data contained in the SHCE.
Premiums in table 2 are based on 2017 earned dates. SHCE premiums are on a 2017 reported basis, without regard to earned date. In addition the SHCE includes risk adjustment payments and accruals and bad debt expenses which are not part of premium revenue.
Claims are based on 2017 incurred dates, with experience paid through February 2018. SHCE claims are on a 2017 reported basis, as known through December 2017, without regard to incurral date. Large claims and claim adjustments incurred in one year and reported in another can cause significant variations in the comparison between the reported SHCE claims and the incurred claims in table 2.

2. Please reconcile the following data:
a. Admin in Table 6 with SHCE
We can't compare the admin expense percent in Table 6 with the SHCE because premiums in table 2 are based on 2017 earned dates. SHCE premiums are on a 2017 reported basis, without regard to earned date. In addition the SHCE includes risk adjustment payments and accruals and bad debt expenses which are not part of premium revenue.

b. QIS in Table 6 with SHCE
We can't compare the QIS percent in Table 6 with the SHCE because Claims are based on 2017 incurred dates, with experience paid through February 2018. SHCE claims are on a 2017 reported basis, as known through December 2017, without regard to incurral date. Large claims and claim adjustments incurred in one year and reported in another can cause significant variations in the comparison between the reported SHCE claims and the incurred claims in table 2.

3. The allowed claims in Table 2 does not reconcile with the 2017 experience period data in Table 4. Please reconcile.
Allowed Claims in table 2 include Rx rebates and exclude capitation, while allowed claims in table 4 exclude Rx rebates and capitation. Adding Rx rebates back into allowed claims in Table 4 will reconcile allowed claims in Table 2. In 2017 experience period data in table 4, allowed claims is $136,756,690, this amount excludes Rx rebates and capitation, adding Rx rebates of $6,500,679 to this amount results in $143,257,369, allowed claims in Table 2.

4. The following questions relate to the manual rate population.
a. Please state which products underlie the PA small group ACA experience manual rate (e.g., PPO, EPO, etc.).
PPO and EPO.

b. Please provide an exhibit demonstrating how the manual rate experience was adjusted to reflect cost differences between the manual rate and products offered in 2019 (i.e., if manual rate is based on PPO, EPO, and POS experience, show how the manual rate was adjusted to reflect EPO and PPO experience only). If no adjustment was applied, please explain why United believes that is appropriate.
No adjustment was applied because experience only contains PPO and EPO, and projection has the same two products.

c. Please provide an Excel exhibit, similar in structure to the URRT, that starts with the manual experience period data and ends with the development of the projected index rate of $528.05.
See Exhibit 4c in the objection response workbook. The new projected index rate is $529.57.

5. Please provide a detailed quantitative exhibit displaying the development of the base rate shown on the '1 – Base Rates & Factors' tab of the provided "PA Rate Filing SB_1Q2019 - UHIC - FINAL.xlsx" excel file. Please show the complete build up starting with experience period allowed or paid PMPM (i.e., please do not use the last PA approved base rate as the starting point). Please clearly quantitatively show and describe how each adjustment (e.g., demographics, trend, morbidity, etc.) was developed and its purpose. Additionally, please demonstrate that pharmacy rebates were removed from the experience in the base rate development.
See Exhibit 5 in the objection response workbook.

6. Please separately identify and describe the capitation arrangements United will utilize in 2019 and confirm that any anticipated capitation arrangement changes from 2017 to 2019 were considered. Additionally, please separately show the current and projected PMPM value of each capitated service.
Known anticipated capitation arrangement changes are considered in the capitation and trend development for the capitations.

Below is the approximate breakdown of the estimates for our capitated services:

Behavioral Health	57%
Physical Health (Chiro)	12%
Medical Management Programs	23%
Other Medical Expenses (ex. Claims surcharges, assessments)	8%

Current capitation PMPM is $14.09. Projected capitation PMPM is $14.8

7. The following questions relate to non-EHB claims.
a. Please separately identify, describe, and quantify the value of the non-EHB services that account for 1.59% of claims (i.e., 1 – 98.41%) as discussed in Section 16 of the actuarial memorandum.

Therapy - (Physical, Aquatic, etc.)	54%
Speech/hearing Therapy, hearing aids, eye exam	27%
Acupuncture, orthotics	10%
Other	9%

b. Please explain why the EHB percent of total allowed cost populated in Section III of Worksheet II of the URRT is 99.14%.
Section III of Worksheet II of the URRT includes ACA and TR business and because TR does not have any non-EHB claims the % will be lower than the % of EHB for ACA only business.

c. Please explain why the "Benefits in addition to EHB" factor in Table 10 of the 'III Plan Rates' tab of the PA Exhibits Excel template is set to 1.000 for all plans since United expects to offer benefits in excess of EHBs in 2019.
In building the Pricing AV factor in column K of Table 10 we included the 1.0162 EHB adjustment, as shown in Exhibit 11 – "AVCS Calc" in the "PA Rate Filing SB_1Q2019 – UHIC – FINAL" excel spreadsheet. Therefore the EHB adjustment was included in Table 10 Col K.

8. Please explain why the pharmacy trends summarized in Table 3b of the 'I.b. Manual Data' tab in the PA Exhibits Excel template are different between entities (i.e., 10.86% for UnitedHealthcare of Pennsylvania, Inc. and 10.82% for UnitedHealthcare Insurance Company).
The UnitedHealthcare of Pennsylvania Inc. filing used an older version of the trend file. It was updated to be the same as UnitedHealthcare Insurance Company.

9. For the expanded Bronze plans, please demonstrate that the copay is less than or equal to 50% coinsurance for that category.
Our portfolio has three expanded Bronze plans. The justification is below.
BIDI is a HSA plan so qualifies as a HDHP.
BIDJ is a HSA plan so qualifies as a HDHP.
BIDK: Generic Rx Copay $10 / Average Unit Cost $46.88 = 21.33% < 50%.

10. The following questions pertain to the plan factors summarized on the '3a – PPO Plan Rels' and '3b – EPO Plan Rels' tabs of the provided "PA Rate Filing SB_1Q2019 - UHIC - FINAL.xlsx" excel file.
a. Please explain why United is offering Silver plans with higher plan relativities than Gold plans. As an example, Silver plan BIDD/911 has an underlying AV of .7070 and a plan factor of 0.5733 and Gold plan BID4/912 has an underlying AV of 0.7640 and a plan factor of 0.5254.
United offers a wide variety of plans in each metal level, including HSA and non-HSA plans. The HSA plans typically attract a different buyer and those are generally the higher priced plans in each metal level. We look at the price points for the entire portfolio together and do not necessarily worry about the price overlap between metal tiers.

b. Please explain why United is offering Silver plans with higher plan relativities than Gold plans. As an example, Silver plan BIDT/512V has an underlying AV of .6830 and a plan factor of 0.4744 and Gold plan BIDP/512V has an underlying AV of 0.7600 and a plan factor of 0.4731.
United offers a wide variety of plans in each metal level, including HSA and non-HSA plans. The HSA plans typically attract a different buyer and those are generally the higher priced plans in each metal level. We look at the price points for the entire portfolio together and do not necessarily worry about the price overlap between metal tiers.

c. Please provide an exhibit that shows the net PMPM, allowed PMPM, and ratio of net PMPM to allowed PMPM for each plan offered in 2019. Please demonstrate this is consistent with the medical and pharmacy relativities presented in these exhibits, and how they relate to the paid to allowed factor column shown on the '10 – Induced Util' tab.
Please see Exhibit 10c in the objection response workbook.

d. Please explain why the highest cost Gold plan (i.e., BIC7/911) is priced at 34% (i.e., 0.7039/0.5254-1) higher than the lowest cost Gold plan (i.e., BID4/912).
United offers a wide variety of plans in each metal level, including HSA and non-HSA plans. The HSA plans typically attract a different buyer and those are generally the higher priced plans in each metal level. We look at the price points for the entire portfolio together and do not necessarily worry about the price overlap between metal tiers.
The highest cost Gold plan, BIC7/911, has a $1,500 deductible and no coinsurance. It also does not charge any cost share after the deductible is satisfied for services as OP Surgery, Scopic, Major Diagnostics, Lab/X-ray, and other services.
The lowest cost Gold plan, BID4/912, has a $1,500 deductible and 20% (40% hospital setting) coinsurance. It also charges additional cost share for OP Surgery, Scopic, Major Diagnostics, Lab/X-ray, and other services.
Our pricing model is built to recognize the richness of each plan and calculates the correct pricing relativity.

11. The following questions relate to the single risk pool adjustment factors shown on the '9 – Single Risk Pool Adj Fctrs' tab of the provided "PA Rate Filing SB_1Q2019 - UHIC - FINAL.xlsx" excel file.
a. The provided exhibit does not appear to be consistent with Section 6 of the Part III actuarial memorandum. Please reconcile the differences, and submit revised filing material, if necessary.
We have revised Section 6 of the Part III Actuarial Memorandum to reflect the correct adjustments.

b. Please provide a detailed quantitative exhibit and explanation of the various components used in developing the "Catastrophic Claim Adjustment" adjustment.
See Exhibit 11b in the objection response workbook.

c. Please provide a detailed quantitative exhibit and explanation of the various components used in developing the "Demographic Creep" adjustment.
The Demographic Creep adjustment is to reflect the effect of aging of the population that occurs from the single risk pool experience period to projection period. We assume the same population of insured will be covered in the projection period and that this factor will adjust for the full amount of aging that occurs.

d. Please provide a detailed quantitative exhibit and explanation of the various components used in developing the "Multichoice Adjustment" adjustment.
See Exhibit 11d in the objection response workbook. We initially offered our Multichoice package on a limited subset of plans from our portfolio. However, in 2016, we have expanded the package to include all plans in our portfolio. 2016 was the first year we offered the expanded package, and since then few groups have elected to offer more than one option. Our pricing guidelines indicate the pricing load should be 3.3% due to the spread between highest and lowest priced plans. Recognizing this option was available since 2016, we only applied 60% of the recommended pricing load in our guidelines.

e. Please provide a detailed quantitative exhibit and explanation of the various components used in developing the “Other Adjustment” adjustment.
The “Other Adjustment” is an adjustment for the difference in plan relativities between the legal entity specific experience and the credibility manual specific experience. Please see Exhibit 11e in the objection response workbook.

f. Please provide a detailed quantitative exhibit and explanation of the various components used in developing the “Cred to Filing Entity” adjustment.
The “Cred to Filing Entity” is an adjustment for the difference in rating area factors between the legal entity specific experience and the credibility manual specific experience. Please see Exhibit 11f in the objection response workbook.

g. Please provide a detailed quantitative exhibit and explanation of the various components used in developing the “Age Shift” adjustment.
The “Age Shift” is an adjustment for the difference in age factors between the legal entity specific experience and the credibility manual specific experience. Please see Exhibit 11g in the objection response workbook.

12. The following questions relate to the risk adjustment transfer assumed in the rate development.
a. Please confirm United intends to refile after the final 2017 risk adjustment transfer figures are released on or around 6/30/2018.
United will review the final 2017 risk adjustment transfer figures and will decide if we will refile based on materiality of the difference.

b. Please explain why the risk adjustment transfer assumption shown on the ’15 – Risk Adj’ tab of the provided “PA Rate Filing SB_1Q2019 - UHIC - FINAL.xlsx” excel file does not match the risk adjustment transfer amount populated in Table 5 of the ‘II Rate Development & Change’ tab of the PA Exhibits Excel file.
Projected risk adjustment PMPM in Table 5 is applied with 98.4% EHB adjustment. -$12.88 = -$13.09 * 98.4%

c. Please explain why the statewide information from the interim 2017 risk adjustment report released on April 25 is not utilized in the risk transfer calculation.
The internal timing of the rate decisions and getting all the state and federal templates put together does not allow us enough time to make this type of adjustment. We are allowed to make a change to the rates based on the final CMS risk adjustment calculation that is published in July.

d. Was any completion applied to the United risk score to account for only including payments through 12/31/2017? If so, what was the factor applied? If not, please provide an explanation for why there was no completion applied.
We did not use a completion factor in the risk score development. We use a third party consultant to get our risk score estimates. We have seen historically by the time we get to the full calendar year with no run-out, there is generally little difference between the two versions. For PA, the 201712 difference in transfer with and without completion was 0.1% of premium. We also area assuming that our risk score and the state average risk score would increase by the same percentage with run-out. Because the transfer calculation is based on the ratio of our risk score to the state average risk score, there is no change in the assumed transfer percentage whether completion is applied or not.

13. The following questions pertain to the ’16 – Area Factor Analysis’ tab of the provided “PA Rate Filing SB_1Q2019 - UHIC - FINAL.xlsx” excel file.
a. Please explain why members were grouped based on member location initially instead of employer location, which is how they are rated.
We don’t have a good source to tell us the cost data by provider location, we used the member location as a proxy for provider location. This is why the data was initially grouped by member location. This data gives us our estimate on the underlying cost by geographic area. We then applied the underlying cost by member location weighted by the actual member location of each employer to get a weighted average member cost by employer location. This method takes into account the actual location of each member for groups situsedin a particular county.

i. Please provide the “Experience Factors” by member county and group county combination so that the current approach can be compared to calculating area factors using employer location.
We are not sure what you mean by experience factors, the Cost report trend data is the actual cost difference by member location.

The current approach does take the member location and group county combination to come up with the final area factors. We first are getting the average cost difference by member location. We then are getting the member location sorted by group location. We then get a weighted average of the cost difference by member location within the group location. This is the last step in the study.

b. Please provide the source of the "Cost Report Trend" data and explain why it is an appropriate source to use as opposed to calculating trend amounts using United's Pennsylvania data.
The "Cost Report Trend" does give us United's Pennsylvania data and is used in the development of the trend factors. The "Cost report trend" also gives us the cost difference for the other states which is used in the development of the out-of-state factors.

c. Please explain what the "Experience Factors 7/1/2016 – 6/30/2017" column represents, how these values were calculated, and how they were normalized for morbidity.

Area Factor Explanation

- The area factors compare average unit costs across geographic areas.
- They do not account for differences in utilization, provider practice patterns, or morbidity of population across locations.
- They are based on where the member resides, not where the provider or employer is located.

Methodology

- For each geographic area, local utilization was repriced at a national unit cost basis. Actual allowed dollars for the geographic area were compared to national repriced allowed dollars to derive an area factor.

d. Please explain why newer experience (i.e., through 12/31/2017) was not utilized in the analysis.
The internal timing of the rate decisions and getting all the state and federal templates put together requires rate decisions to be made in early 2018. We wanted to get at least three months of runout for this study, so using data through 12/31/2017 is not available. The experience data for this study with data through 6/30/2017 with 3 months of run out was not available until middle of November. We also get data from multiple sources for this study. It takes us some time to put it all together and have internal discussions. The timing of all of this required us to use this experience data.

e. Please quantitatively show and explain how the hard-coded Out of State factors in row 82 were calculated.
The out of state factor was determined by taking all members of PA situsedgroups that live outside of PA and matching to the state county cost factor. We then determined the average cost factor for all of these out of state members. See exhibit 13e in the objection response workbook.

f. Please explain what the 0.989 factor represents in cells E127:E130.
When mapping the Area Factor using the member's address, we used the zip code stored in the system. Some of those zip codes were invalid making the mapping impossible.
This is why you correctly noticed that there are membership differences between the membership by area in rows 3 through 73 and the membership by area in rows 96 through 106.
While making all the attempts to attach a valid zip code, the EPA members were accounted for, while WPA membership numbers were reduced from 11,328 to 11,148 due to invalid member's zip code. Since the membership was different the weighting didn't come out to be revenue neutral. Since the lost membership was in WPA we decided to apply a .989 adjustment to the area factor calculation to account for the missing members and arrive at a revenue neutral impact.

g. Please explain why the membership by area in rows 3 through 73 does not match the membership by area in rows 96 through 106. As an example, there is a total of 532 members in rating area 3 in rows 3 through 15. However, there are only 439 members listed in rating area 3 in row 99.
Please, see response to 13(f) above.

14. The following questions relate to the expense assumptions utilized in the rate development.
a. Please provide an exhibit displaying the development of the 1.2% ACA Insurer Fee expense assumption. Please explicitly demonstrate that the ACA Insurer Fee expense will not be collected in calendar year 2019.
See Exhibit 14a in the objection response workbook for the development of the 1.2% ACA Insurer Fee expense assumption. You can see from the exhibit that the 2019 fee is 0% and the 2020 fee is 2.65%.The 2020 fee is built into the quarterly rates based on the effective or renewal date and the number of months of coverage in 2020.

b. Please note that carriers should not be pricing for the PCORI fee in the 2019 calendar year rate development as the fee ends for plan years ending September 30, 2019 (i.e., policies issued before October 1, 2018). Please remove this non-benefit expense assumption, reprice, and resubmit revised filing materials.
It is removed and new materials are included.

c. Please describe the differences in expense structures between the UnitedHelathcare Insurance Company and UnitedHealthcare of Pennsylvania, Inc. entities.
Since the UnitedHealthcare of Pennsylvania Inc. does not have any current experience and no historical expense information, we assumed the expense structures were the same for both licenses.

d. Please confirm that United reduced the Federal Income Tax assumption to 21% due to the passage of the "Tax Cuts and Jobs Act" on December 20, 2017.
Yes United reduced the federal income tax assumption to 21%.

e. Please show the development of the Premium tax of 1.73% in table 6. Also
We relied on the corporate finance area for the expense estimates. Based on the modeling performed 1.73% of premium was estimated. We then applied this percentage in the rate expense section of the rate filing.

f. It appears that the HIT is double counted – in trend in Table 5A and in Table 6. Please explain or revise.
Table 6 was revised and the rates were recalculated.

15. Per Department guidance, the input in all cells in Table 6, must be a formula. Please comply.
We do not have formulas for the inputs in this table. All of the numbers come from corporate finance.

16. Please provide a detailed quantitative exhibit displaying the development of the projected paid-to-allowed ratio populated in Worksheet I of the URRT. Additionally, please explain why this does not reconcile to the average projected paid-to-allowed ratio shown in Table 10 of the 'III Plan Rates' tab of the PA Exhibits Excel template.
The paid-to-allowed in Worksheet I of the URRT is 80.8%. We show a calculation of it in Exhibit 16 of the objection response workbook. It is also included in Exhibit 11 – "AVCS Calc" in the "PA Rate Filing SB_1Q2019 - UHIC - FINAL.xlsx" excel file. We are unsure where in Table 10 of the 'III Plan Rates' tab of the PA Exhibits Excel template we should find the paid-to-allowed.

17. Please provide a detailed MLR calculation. Please start with projected incurred claims PMPM and projected premiums PMPM, and then explicitly show the PMPM impact of each adjustment applied to claims and premium (e.g., risk adjustment, QI expenses, etc.) in arriving at the projected MLR.
See Exhibit 17 in the objection response workbook

18. Please provide an exhibit demonstrating the various components (e.g., claims trend, underlying experience, etc.) driving the 12.75% rate increase requested shown in Section 3 of the Part III actuarial memorandum and in Table 5A of the PA actuarial memorandum.
See Exhibit 18 in the objection response workbook.

19. Please explain why the "Benefit Richness" factors shown in Table 10 of the 'III Plan Rates' tab of the PA Exhibits Excel template are not the same at a given metal level for each entity (i.e., UnitedHealthcare of Pennsylvania, Inc. Gold factor is 1.002 and the UnitedHelathcare Insurance Company Gold factor is 0.980).
The Benefit Richness is a normalized factor and it is calculated by dividing each plans AVCS by its Paid to Allowed Ratio. Each plan's AVCS is calculated by comparing the plans relativity over the average plan relativity for the license and then it is divided by that license's EHB% and multiplied by its Projected Paid to Allowed ratio. (Benefit Richness = AVCS/Paid to Allowed Ratio.) (AVCS = Plan Rel / Avg Rel / EHB% * Projected Paid to Allowed ratio)
All of these factors are specific to either the license or the plan itself; therefore the Benefit Richness factors for each license are not the same at a given metal level.

20. The data in Exhibit 7 is projected. Please provide the experience period and current member distribution. If the projected distribution is different from the current, what is the basis for the difference?
Please see Exhibit 20 in the objection response workbook. The data in Exhibit 7 is the actual credibility manual membership distribution, which is CY 2017 experience. The projection membership distribution is the same as the credibility manual distribution.

21. The data in Exhibit 8 is current. Please provide the experience period and projected member distribution. If the projected distribution is different from the current, what is the basis for the difference?
Please see Exhibit 21 in the objection response workbook. Exhibit 8 is the CY 2017 experience membership distribution. The projected distribution is the same as the CY 2017 experience membership distribution.

22. Exhibit 5b shows benefit changes from 2018 to 2019 and the corresponding pricing impact. Please show the develop that the pricing impact.
UnitedHealthcare has a proprietary pricing model that calculates plan relativity factors for medical and pharmacy benefits. The pricing impact was calculated by comparing the plan relativity factor of the 2018 benefit designs run through our 2019 pricing tool to the plan relativity factor of the 2019 benefit design. Please see Exhibit 22 in the objection response workbook.

23. Please show the development of the average commission as shown in Table 6. Additionally, the current and 2018 broker agreements should be included and used to develop the percent shown in Table 6 as well as the associated pmpm.
We relied on the corporate finance area for the expense estimates. Based on the modeling performed 3.43% of premium was estimated. We then applied this percentage in the rate expense section of the rate filing. The commission estimate is based on the commissions we pay brokers, any commissions we pay to general agents as well as any broker bonus. Commissions vary by group size, first vs renewal, and by geographic area. See attached exhibit 23.

24. Please certify that the rates generated from Table 11 are consistent with the rates included in the PA Plan Design Summary and the Federal Rates Template.
Rates generated from Table 11 are only slightly different from the rates included in the PA Plan Design Summary and the Federal Rates Template due to rounding.

Maria Ilea, ASA, MAAA
Associate Director Actuarial Services

Response to Objection Question 4C

Total Experience Period Allowed Claim Cost, PMPM	**$417.69**

Adjustments from Experience to Projection Period

Re: UnitedHealthcare Insurance Company – 2019 Small Group ACA-Compliant Rate Filing

Ms. Cherri Sanders-Jones | Actuary
Pennsylvania Insurance Department
1311 Strawberry Square | Harrisburg, PA 17120

Effective 1/1/2019
SERFF ID# UHLC-131482147

Dear Ms. Sanders-Jones,

Thank you for your letter reviewing our SERFF filing submission dated 7/6/2018. These are our responses.

1. The following question relates to the 4c response.
a. The requested exhibit was not provided. Please provide an Excel exhibit, similar in structure to the URRT, that starts with the manual experience period data, in Section I and ends with the development of the projected index rate of $529.57. Additionally, ensure that all assumptions are supported.

Please see Exhibit 1 in the Objection Response workbook.

Calculations for the "Adjustments from Experience to Projection Period" for the Legal Entity can be found in Exhibit 1 of the Objection Response workbook and for the Credibility Manual they can be found in Exhibit "9 – Single Risk Pool Adj Fctrs" of the "PA Rate Filing SB_1Q2019 – UHIC – FINAL –v3" excel file.

2. The following questions relate to the response to question 5.
a. The total experience incurred PMPM and pharmacy rebates PMPM underlying the base rate development does not reconcile to the incurred PMPM shown in Table 2b of the "2019_SmGrp_UHIC_PAAMExhibits_062218" excel file. Please justify the difference.

The total experience incurred PMPM and pharmacy rebates PMPM, underlying the base rate development provided in exhibit 5 of "UHIC Objection Response Exhibits 06.15.2018", were taken by mistake from an analysis based on calendar year 2017 experience with only one month of runout. Additionally, the capitation calculated as $14.09 PMPM included $3.25 PMPM for medical management programs. We removed this portion of capitation and the new capitation PMPM is $10.84. Table 2a has been updated to correct these errors. The "Total Claims PMPM" now calculates to $342.36.

The "Total Claims PMPM" of $342.36, stated above, reconciles to the calculated incurred PMPM shown in Table 2b of the "2019_SmGrp_UHIC_PAAMExhibits_071318" excel file as follows: (Ultimate Incurred Claims + Total Prescription Drug Rebates + Total EHB Capitation)/Member Months or ($97,768,860.64 + (-$5,550,898.39) +$3,014,380.68)/278,164 = $342.36

b. Please provide a detailed quantitative exhibit demonstrating the development of the 1.0022 PPACA Fees adjustment.

Based on the 2.65% total ACA Fee, the amount of the fee that has to be allocated monthly is as follows:

Renewal Month	2019 Insurer Fee
01	0.00%
02	0.22%
03	0.44%
04	0.66%
05	0.88%
06	1.10%
07	1.32%
08	1.53%
09	1.75%
10	1.97%
11	2.19%
12	2.41%

For 1Q2019, the average Insurer Fee is 0.22%. Each quarter after that represents 0.66% increase from the previous quarter, and we reflect that increase in the trend adjustment. However, the 0.22% for the 1Q2019 adjustment is included in the base rate.

c. Please provide a detailed quantitative exhibit demonstrating the development of the 0.5982 medical relativity adjustment.

Please see Exhibit 2c in the objection response workbook.

d. Please provide a detailed quantitative exhibit demonstrating the development of the 0.0494 pharmacy relativity adjustment.

Please see Exhibit 2d in the objection response workbook.

e. Please provide a detailed quantitative exhibit demonstrating the development of the 1.4257 age calibration adjustment. Additionally, please explain why this does not reconcile to the 1.4298 age calibration factor developed on the '7 – Age Calibration' tab of the "PA Rate Filing SB_1Q2019 - UHIC - FINAL - v2" excel file or the 1.4178 age factor summarized in the response to question 20.

Please see Exhibit 2e in the Objection Response workbook for the development of the 1.4257 age factor. This factor is calculated using both membership and premium weighting as described below:

- Age Factor Part 1 is calculated as ∑[(Med_BaseRate*Med_Rel*Med_EDA + Rx_Base_Rate*Rx_Rel*Rx_EDA)*Age_Factor*Member_Months] / ∑(Member_Months).
- Age Factor Part 2 is calculated as ∑[(Med_BaseRate*Med_Rel*Med_EDA + Rx_Base_Rate*Rx_Rel*Rx_EDA)*Member_Months] / ∑(Member_Months.

The average age factor of 1.4298 was calculated as a straight average age factor membership weighted; therefore, the 1.4257 average age factor is more accurate. We have since removed the 1.4298 age factor from our calculations and replaced it with the 1.4257 factor to be consistent across all files.

The average age factor of 1.4178 was provided in response to question 20 which asked for the current age factor for the ACA membership enrolled as of February 2018. Unintentionally we included the TR

membership in the calculation. The initial chart showed 30,190 members while the correct number is 24,202. The updated average is 1.4289 and is included as exhibit 5a since it is used to answer question 5a as well.

f. Please provide a detailed quantitative exhibit demonstrating the development of the 0.8371 geographic calibration adjustment. Additionally, please explain why this does not reconcile to the 0.8509 age calibration factor developed on the '8 – Geographic Calibration' tab of the "PA Rate Filing SB_1Q2019 - UHIC - FINAL - v2" excel file.

Please see Exhibit 2f-i in the Objection Response workbook for the development of the 0.8371 rating area factor. This factor is calculated using a membership and premium weighting.

- Area Factor Part 1 is calculated as ∑[(Med_BaseRate*Med_Rel*Med_EDA + Rx_Base_Rate*Rx_Rel*Rx_EDA)*Age_Factor*Area_Factor*Member_Months] / ∑(Member_Months).
- Age Factor Part 2 is calculated as ∑[(Med_BaseRate*Med_Rel*Med_EDA + Rx_Base_Rate*Rx_Rel*Rx_EDA)*Age_Factor*Member_Months] / ∑(Member_Months.

Please see Exhibit 2f-ii in the Objection Response workbook. The average area factor of 0.8509 is using the new proposed area factors. This average is calculated as a straight average membership weighted.

3. The following question relates to the response to question 6.
a. Please provide additional information on the medical management programs. Also, discuss how these programs differ from the programs included in the Quality Improvements Initiatives included in Table 6 cell C52.

We have removed the medical management programs ($3.25) from the capitation. The impacted tables in "2019_SmGrp_UHIC_PAAMExhibits_071318" have been updated.

b. Discuss how the inclusion of the medical management programs in the EHB Capitations in Table 2 is consistent with cost categories allowances as described in the URRT.

This was corrected.

4. The following questions relate to the response to question 10.
a. In your response to question 10 you state that "The HSA plans typically attract a different buyer and those are generally the higher priced plans in each metal level." Please provide quantitative and qualitative support for the adjustment to HSA plans and show how any morbidity differences are not included in this adjustment.

Please refer to Exhibit 4a in the Objection Response workbook.

The process of developing the plan relativity model includes creating both a slope and making adjustments such that across a continuum of plan designs the loss ratio is level after the application of the risk adjustment. Graph A demonstrates the first step of sloping the plan relativities. As you can see, the BCR (loss ratio) for NCDH (non-consumer driven health) plans is relatively flat. However, for HSA plans the BCRs are still somewhat higher. In addition, the regression line of the HSA plans is increasing, supporting the assertion that the higher the plan relativity (or lower the member cost share) the higher the BCRs.

Graph B demonstrates the final impact of both the sloping and HSA topside exercises. As you can see the BCRs across the spectrum of plan relativities are centered around a flat regression line.

b. Please provide an exhibit that summarizes experience period 2017 ACA allowed and paid claims cost for each metal level split by HSA and non-HSA plans.

Please see Exhibit 4b in the Objection Response workbook.

c. Please explain the purpose and provide the quantitative development of the topside adjustments shown in the exhibit provided in the response to question 10c.

For the plans that show a topside adjustment of 0.0093 we made this adjustment to account for the additional costs of offering the motion rider. Cost is estimated at $6.64 PMPM. We calculated the adjustment as follows: Cost/(1/1/2018 Base Rate * Annual Trend) = $6.64 / ($654.27 * 1.096) = $6.64/$717.08 = 0.0093

This year $0 copay Virtual Visits were added to some of our products for SG. We used actuarial judgement to determine the load for this benefit. United has offered Virtual Visits on other product lines and have seen a significant increase in Utilization on this benefit. It is still too early to see if there is any potential saving offset from a reduction of office visits, or possibly an increase in utilization of other services after the VV. Since we don't enough data we used actuarial judgement and assumed a load was prudent. The cost for a VV is $49, and if we assume only 1.5% utilization of this benefit we get about $0.75. This came out to about a 0.25% load.

5. The following questions pertain to the response to question 11.
a. The response to question 11c did not provide the requested level of detail. Please provide a quantitative exhibit demonstrating the development of the 0.5% demographic creep adjustment. Additionally, please explain why United believes it is appropriate to apply the upward 0.5% adjustment when the response to question 20 indicates the population United insureds is getting younger (i.e., 1.4298 average age factor in 2017 and 1.4178 average age factor in February 2018).

The average age factor of 1.4298 is calculated using membership weighting only while the average age factor of 1.4257 uses both membership weighting and premium weighting. The latter factor is considered to be the more accurate factor and is discussed above in response to question 2e.

The average age factor of 1.4178 was incorrectly provided as it includes both ACA membership and Transitional membership. This has since been updated and can be viewed in Exhibit 5a of the Objection Response workbook. The ACA only average age factor in this exhibit is 1.4289. We also have calculated the average age factor for the same February 2018 cohort as of February 2019 the average age factor is 1.4662. Therefore the increase in the average age factor is estimated to be 2.61% for one year. For six months this would be approximately 1.3% and we are only applying 0.5% as a demographic adjustment.

b. Please explain why United believes it is appropriate to apply an adjustment in the base rate development to account for the Multichoice package when it appears there will be no difference between the Multichoice offering in the experience period and the projection period.

We initially offered our Multichoice package on a limited subset of plans from our portfolio. However, in 2016 we have expanded the package to include all plans in our portfolio. Since 2016 was the first year we offered the expanded package, few groups initially elected to offer more than one option. Our pricing guidelines indicate the pricing load should be 3.3% due to the spread between highest and lowest priced plans. Our data, as shown in Exhibit 5b, indicates that the number of members associated with groups who elect to offer more than one option is increasing as this is becoming more known in the marketplace. Since the membership multichoice continues to grow, we don't think the full amount of the anticipated load is built into the experience. We applied 60% of the total 3.3% pricing load in anticipation of the membership increase.

See Exhibit 5b in the objection response workbook.

6. Please provide an exhibit that summarizes average paid PMPM, risk score, and membership by rating region based on employer location for calendar year 2017 ACA experience to compare risk adjusted paid claims by employer location.

See Exhibit 6 in the objection response workbook.

7. The requested base rate in the revised filing submission decreased relative to the initial requested base rate (i.e., UnitedHealthcare Insurance Company decreased from $697.23 to $688.93 and UnitedHealthcare of PA, Inc. decreased from $683.23 to $675.15). Please provide a quantitative exhibit that demonstrates the drivers of the decrease in the requested base rate.

In response to the Objection Letter from 6/15/2018 question 14 f, we eliminated the 1.2% ACA fee from the retention formula and subsequently we reduced the base rates by 1.2%. The new proposed base rates, $688.93 for UHIC and $675.15 for UHCPA, are 1.2% lower than the initially filed base rates.

8. There appears to be discrepancies in the trend assumptions utilized in the rate development. Please explain the drivers of the differences between the 7.95% annual trend shown in Table 3b of the PA template, the 9.1% annual trend used in the development of the base rate, and the 12.57% annual trend used in developing the effective date adjustments. Additionally, please provide a detailed quantitative exhibit demonstrating how the trend assumptions are related (e.g., adjustments such as ACA Insurer Fee required to develop the 12.57% trend assumption from the 7.95% trend assumption).

The instructions to populate table 3b. of the PA template said to provide the claims trend without leveraging. The 7.95% is the claims trend without leveraging. 9.1% is the claims trend with leveraging. We provided this in Exhibit 17 of the "PA Rate Filing SB_1Q2019 – UHIC – FINAL –v3" excel file. You can see the leveraging component is 1.1%. Forward pricing trend is 9.7% and this was provided in Exhibit 6 of the "PA Rate Filing SB_1Q2019 – UHIC – FINAL –v3" excel file. Our forward pricing trend reflects future expected contracting changes and the additional uncertainty of projecting further into the future.

The 12.57% is the annual value that includes the forward pricing trend (9.7%) and the ACA fees (2.65%).

The following table shows how we are incorporating the 2.65% ACA fee in the quarterly pricing trend to apply the appropriate portion of the fee for each renewal quarter.

Since the pricing trend is 9.7%, the quarterly pricing trend is 2.3%. The quarterly portion of the ACA fee is 0.7% and it is added to the 2.3% quarterly trend. This calculation results in a 3% quarterly pricing trend and ACA fee which, when annualized, becomes 12.57%. In Table 5 trend was populated with the 12.57% value.

	Q1	Q2	Q3	Q4	Annual
Quarterly Trend	1	1.023	1.047	1.072	1.097
Insurer's Fee	1	1.007	1.013	1.020	1.0265
Combined	1	1.030	1.061	1.093	1.126

9. Your response to question 23 is inadequate. Please show the development of the average commission as shown in Table 6. Additionally, the current and 2019 broker agreements should be included and used to develop the percent shown in Table 6 as well as the associated pmpm.

Please see Exhibit 9 in the Objection Response workbook.

10. In response to question 24, you indicate that the rates generated from Table 11 are only slightly different from the rates included in the Plan Design Summary. In dollars, what is the rang of the difference?

We have created the following chart that shows minimum, maximum and average difference between the Table 11 rates and the rates included in the Plan Design Summary.

UHIC Summary			
	Min	**Max**	**Average**
Q1	$ (0.02)	$ 0.00	$ (0.01)
Q2	$ (0.02)	$ (0.00)	$ (0.01)
Q3	$ (0.00)	$ 0.02	$ 0.01
Q4	$ 0.04	$ 0.07	$ 0.05

Section I: Experience period data

Experience Period: 1/1/2017 to 12/31/2017

	Experience Period Aggregate Amount	PMPM	% of Prem
Premiums (net of MLR Rebate) in Experience Period:	$116,181,441	$417.67	100.00%
Incurred Claims in Experience Period	$95,232,343	342.36	81.97%
Allowed Claims:	$116,186,499	417.69	100.00%
Index Rate of Experience Period		$411.00	
Experience Period Member Months	278,164		

	Allowed Claims (Non-Capitated)	$ 118,723,016.74
+	**Total Prescription Drug Rebates***	$ (5,550,898.39)
+	**Total EHB Capitation**	$ 3,014,380.68
=	**Allowed Claims URRT:**	$ 116,186,499.03

This matches the Allowed Claims from the version of the URRT we created today in response to Q#1 and shown above, cell F28 .

	Ultimate Incurred Claims	$ 97,768,860.64
+	**Total Prescription Drug Rebates***	$ (5,550,898.39)
+	**Total EHB Capitation**	$ 3,014,380.68
=	**Incurred Claims URRT:**	$ 95,232,342.93

This matches the Incurred Claims in Experience Period from the version of the URRT we created today in response to Q#1 and shown above, cell F27 .

When we filled out the template the first time, We started with data that includes the total claims, we receive capitation from another source and then subtract the total claims to get the Ultimate claims without capitation. The original capitation dollars we received included items that should not have been included, when we answered this objection we received the capitations that match to our STAT filings. Since our total claims are not changing, but we are just reporting the correct capitations we subtracted the capitation from the total claims to get the new Ultimtae claims in the worksheet.
