2019 Rates Table Template v8.1

All fields with an asterisk (*) are required. To validate press Validate button or Ctrl + Shift + I. To finalize, press Finalize button or Ctrl + Shift + F.

If you are in a community rating state, select Family-Tier Rates under Rating Method and fill in all columns.

If you are not in a community rating state, select Age-Based Rates under Rating Method and provide an Individual Rate for every age band.

If Tobacco is Tobacco User/Non-Tobacco User, you must give a rate for Tobacco Use and Non-Tobacco Use.

To add a new sheet, press the Add Sheet button, or Ctrl + Shift + H. All plans must have the same dates on a sheet.

HIOS Issuer ID*	16322
Federal TIN*	46-2824626
Rate Effective Date*	7/1/2019
Rate Expiration Date*	9/30/2019
Rating Method*	Age-Based Rates

Plan ID*	Rating Area ID*	Tobacco*	Age*	Individual Rate*
Required: Enter the 14-character Plan ID	Required: Select the Rating Area ID	Required: Select if Tobacco use of subscriber is used to determine if a person is eligible for a rate from a plan	Required: Select the age of a subscriber eligible for the rate	Required: Enter the rate of an Individual Non-Tobacco or No Preference enrollee on a plan

2019 Rates Table Template v8.1

All fields with an asterisk (*) are required. To validate press Validate button or Ctrl + Shift + I. To finalize, press Finalize button or Ctrl + Shift + F.

If you are in a community rating state, select Family-Tier Rates under Rating Method and fill in all columns.

If you are not in a community rating state, select Age-Based Rates under Rating Method and provide an Individual Rate for every age band.

If Tobacco is Tobacco User/Non-Tobacco User, you must give a rate for Tobacco Use and Non-Tobacco Use.

To add a new sheet, press the Add Sheet button, or Ctrl + Shift + H. All plans must have the same dates on a sheet.

HIOS Issuer ID*	16322
Federal TIN*	46-2824626
Rate Effective Date*	10/1/2019
Rate Expiration Date*	12/31/2019
Rating Method*	Age-Based Rates

Plan ID*	Rating Area ID*	Tobacco*	Age*	Individual Rate*
Required: Enter the 14-character Plan ID	Required: Select the Rating Area ID	Required: Select if Tobacco use of subscriber is used to determine if a person is eligible for a rate from a plan	Required: Select the age of a subscriber eligible for the rate	Required: Enter the rate of an Individual Non-Tobacco or No Preference enrollee on a plan

Question	Comment/Request	Response
1	<p>This question is in reference to file: "UPMC Health Options, Inc. Small Group Supporting Exhibits UPMC-131495951.xlsx", tab [Exhibit 10]. This shows the derivation of the annual trend which applies a "FACTOR USED TO ADJUST COST/UTIL TRENDS" equal to 0.5802.</p> <p>a. Please explain what this factor is adjusting for and how it was developed.</p> <p>b. Please provide a numerical development of the factor 0.5802.</p> <p>c. Please include the trends based on historical experience for each benefit category for years 2015, 2016, 2017, and 2018 (year to date). We realize 2018 trends will be partially based on estimated claim costs.</p>	<p>a. This factor is used to adjust observed trends based on historical data to the actual trend that is used in 2019 rate development.</p> <p>b. This factor has been developed to account for the fact that a catastrophic claimant was included in the historical data used to develop the observed trend, yet this claimant will not be part of the risk pool in the projection period. This factor also accounts for the fact that we have observed lower historical trends in the large group market relative to the small group market. UPMC's small group block of business has experienced significant growth in recent years, which may lead to skewed results in trend calculations when using this block's underlying data. Because of this, large group data was used as a comparable data source, which shows annual trend in the range of 2-3%. Also, since some large groups renew as a small group throughout the course of a given calendar year due to a shrinking work force, this factor is used to account for the lower historical trends observed for such transitioning groups. We also anticipate improved coordinated clinical care in rating area 1 for the small group market for 2019, which has been incorporated into this adjustment factor. Finally, this factor also accounts for benefit buy-downs that are anticipated to occur between the experience and projection periods. Please note that the 0.5802 factor was developed from qualitative estimates rather than a specific numerical calculation.</p> <p>c. Data pertaining to historical trends is displayed on the "Exhibit 1C" tab of this file.</p>
2	<p>Please provide numerical support and explain the methodology used to determine the morbidity adjustment factor equal to 0.940.</p>	<p>A narrative discussing the rationale behind the morbidity adjustment used in this filing is provided in the "Index Rate" section of the PA Actuarial Memorandum. This factor is intended to account for the fact that healthier members have enrolled in this company's ACA-compliant plans with each passing year. Recent times have seen this change occur more rapidly than in prior years, so we estimated that the morbidity of the insured population would decrease by approximately 6%.</p>
3	<p>Please provide numerical support and explain the methodology used to determine the change in network adjustment factor equal to 1.018.</p>	<p>As mentioned in the Index Rate section of the PA Actuarial Memorandum, this factor is set equal to the geographical calibration factor. The calculation of this factor is shown in Exhibit 6 of the Supporting Exhibits.</p>
4	<p>Per Table 2b, it appears that the average paid-to-allowed ratio of the benefit plans underlying the Manual Rate was approximately 86.9% (i.e. "Ultimate Incurred Claims" / "Allowed Claims (Non-Capitated)"). Given the average projected paid-to-allowed ratio for the plans associated with this filing is 81.7%, please describe and demonstrate quantitatively how the Manual Base Period Allowed EHB claims amount equal to \$451.99 PMPM was adjusted to reflect the impact of lower induced utilization in the development of the Index Rate. If it was not, please provide justification for not applying this adjustment.</p>	<p>No additional adjustment has been made to account for lower induced utilization due to the difference between the paid-to-allowed ratio calculated from Table 2b and the weighted average of the Pricing AVs. As mentioned in the response to question 1 above, benefit buy-downs are already accounted for in the annual trend. Further decreasing the Manual Base Period Allowed EHB claims PMPM to account for this effect would also require an adjustment to account for less favorable risk adjustment. All of this would have an offsetting effect, making such an adjustment unnecessary.</p>
5	<p>Please demonstrate quantitatively how the 2.0% quarterly trend factor being utilized in Table 5a was developed.</p>	<p>The 2.0% quarterly trend was developed to account for the pro-rated Health Insurance Provider Fee over the 2019-2020 timeframe. The fee of 2.8% was combined with the 3.2% annual trend to generate a new overall value for trend. This value was converted to quarterly trend and rounded up, resulting in the 2.0% quarterly trend implemented in Table 5A. A large portion of groups renew later in the calendar year (specifically in December) and will be subject to 75% (or more) of the fee in 2019. Therefore, using the full fee and rounding the adjusted quarterly trend up was deemed to be an appropriate estimate for Table 5A trend development.</p>
6	<p>Please explain the methodology used to develop the Plan Actuarial Values (Pricing AV's) utilized in Table 10.</p>	<p>The Pricing AV for each plan was determined by the issuer's own pricing model based on 2017 claims experience from UPMC's fully-insured commercial block of business. This model calculates an AV for a given plan by first trending the allowed claims forward two years to the projection period, calculating paid amounts for each benefit category based on the benefit design of a given plan and projected allowed claims data, and taking the ratio of the total projected paid claims to projected allowed claims.</p>

7	<p>The following questions are in regards to the induced demand factors:</p> <p>a. Please provide numerical support and explain the methodology used to determine the projected allowed claims and paid claims in the induced utilization factor calculation shown in Exhibit 4a in the Supporting Exhibits File.</p> <p>b. Please explain why the induced demand factors would change between plans with the same metal levels as shown in the table below? The table below is the range of values for the induced demand factors by metal level based on the values entered in Table 10 of the PA Actuarial Memorandum Exhibits. Please be sure to explain how these varying factors by metal level are not double counting for any plan level factor that is applied separately (e.g., Pricing AV, Non-EHBs).</p> <p>Benefit Richness Factor Metal Min. Max. Platinum 1.1299 1.1588 Gold 0.9367 0.9607 Silver 0.8836 0.9063 Bronze 0.9077 0.9310</p>	<p>a. Projected allowed claims for each plan were calculated by taking the market-level total projected allowed claims PMPM for 2019 (both EHB and non-EHB) and multiplying this value by the plan-level Provider Network factors from Table 10 as well as induced demand. Projected paid claims were developed by calculating the product of these plan-level projected allowed claims estimates and the Pricing AVs from Table 10.</p> <p>b. The induced demand factors vary by product type as opposed to solely metal level, although the range of factors within a given metal level has been kept rather small. Variations in induced demand by product type are not reflected in any of the other plan-level factors included in Table 10.</p>
8	<p>Please explain the methodology used and show numerical support for the area factors shown in Exhibit 6 of the Supporting Exhibits File. Be sure to support the changes in the assumed factors from the 2018 rate filing and explain the large shifts in those area factors that did change.</p>	<p>Please see the "Exhibit 8" tab of this file for a derivation of the proposed geographic factors for 2019. These factors are developed by first mapping each county to the hospital system most likely to be used by enrolled members. The price differentials relative to our 2017 service area for each of these hospital systems are then estimated using a variety of methods, such as fee schedules and claims data. Finally, projected enrollment for each county is used to blend these price differentials for each region as defined by the state.</p>
9	<p>The sum of the rate increase components shown in Table 8, line H does not approximate line A as indicated by the label. Please explain why this value is so different from the change in Calibrated Plan Adjusted Index Rate.</p>	<p>This disparity arises from various inconsistencies in Table 8. Network adjustments are accounted for twice and changes in the plan-level weighting from 2018 to 2019 are not accounted for. The filed 2018 allowed claims is being compared against the 2018 calibration plan adjusted index rate calculated as part of this year's filing. Since the latter of these is different from the corresponding value calculated in the prior year's filing due to changes in plan-level weighting, the values calculated in Table 8 will not line up properly.</p>
10	<p>Please confirm whether change in the statewide average premium between 2017 and 2019 as well as the 0.86 adjustment factor were accounted for in the development of the Projected Risk Adjustment PMPM amount equal to \$14.51. If so, please demonstrate quantitatively how these adjustments were taken into account. If not, please describe why it is reasonable not to do so.</p>	<p>The Projected Risk Adjustment PMPM value of \$14.51 was set equal to the Experience Period Risk Adjustment PMPM, which was calculated based on the transfer payment estimate received from PID based on data from RATEE files accrued as of May 1, 2018. Since the estimate received from PID was labeled as an "estimated risk adjustment transfer amount," this value was assumed to account for all factors that contribute to a given transfer amount, and no additional adjustments were made to account for changes in statewide average premium or the 0.86 factor. Enrollment changes between the experience and projection periods are assumed to involve members of average risk. Thus, these membership fluctuations were estimated to have no impact on the transfer payment PMPM. No additional adjustment was made to account for the change in statewide average premium since we anticipate minimal change in the rates for 2019 as well as member buy-downs, which will lead to a negligible effect for this particular field.</p>
11	<p>Please clarify why the Projected Risk Adjustment PMPM value included in cell C31 of Table 5 is \$14.66 rather than \$14.51. If the value included in Table 5 is incorrect, please update as appropriate. If the value included in Table 5 is correct, please explain.</p>	<p>This has been corrected in both Table 5 and worksheet 1, section III of the URRT.</p>
12	<p>Each response to a Department data call must contain a cover letter that details the changes made to the PA Actuarial Memorandum Exhibits and the reasons why the changes were made, e.g., in response to Department question number 5.</p>	<p>This cover letter has been uploaded in the Supporting Documentation section in SERFF.</p>
13	<p>Please confirm that you have tested to ensure that the rates in Table 11 of the Actuarial Memorandum Exhibits, the PA Plan Design Summary and Rate Tables, the Federal Rates Template, and in the binder are identical.</p>	<p>We can confirm that the rates in Table 11 of the Actuarial Memorandum Exhibits, the PA Plan Design Summary and Rate Tables, the Federal Rates Template, and in the binder are identical.</p>

14	UPMC using an overall annual trend of 3.2% but quarterly trend of 2%. The PID Rate Filing Guidance on page 2 notes that a detailed explanation is required if a different trend is used in Table 3 versus Table 5A. Please explain why the trends differ.	The trend used in Table 5A is different than the overall annual trend used in rate development because the former accounts for the pro-rated Health Insurance Provider Fee over the 2019-2020 timeframe. The fee of 2.8% was combined with the 3.2% annual trend to generate a new overall value for trend. This value was converted to quarterly trend and rounded up, resulting in the 2.0% quarterly trend implemented in Table 5A. A large portion of groups renew later in the calendar year (specifically in December) and will be subject to 75% (or more) of the fee in 2019. Therefore, using the full fee and rounding the adjusted quarterly trend up was deemed to be an appropriate estimate for Table 5A trend development.
15	The Moratorium on Health Insurance Tax is for 2019 year only. Renewals in quarters 2, 3 and 4 will continue into the year 2020. Please explain why the pro-rated amount of HIT was not included as per PID Rate Filing Guidance on page 2.	As discussed in the responses to questions 5 and 14 above, the pro-rated Health Insurance Provider Fee was accounted for in the 2.0% quarterly trend developed in Table 5A.
16	In the PA Actuarial Memo on page 7 - after the discussion on the projected loss ratio, there is a discussion of the difference between the way that Table 3 uses weights versus how the URRT uses weights to determine trend. Please be aware that the Department has changed the way that Table 3 calculates aggregate trend to mimic the method used by the URRT.	This discussion has been removed from the actuarial memoranda.

Exhibit 1c: Historical Data for Trend Development

***2018 data has been extrapolated to cover 12 months*

Service Category	Year	Member_Months	Allowed Amt	Service Cnt	Unit Cost	Utilization PTPM	Cost	Utilization	Overall

3	1.123
6	1.324
7	1.167
9	1.153

Question	Comment/Request	Response
1	<p>The following questions refer to your response to question 1 (of Round 1) regarding the “FACTOR USED TO ADJUST COST/UTIL TRENDS” equal to 0.5802.</p> <p>a. Please provide the specific impact to the observed trend rate of removing the catastrophic claimant referenced in your response (i.e., what would the observed trend rate equal to 5.58% had been if that claimant was removed from this historical analysis).</p>	<p>a. Removing the catastrophic claimant from the data used to develop the observed trend rate results in a 0.8% decrease in the observed annual trend.</p>
2	<p>Regarding your response to question 4 (of Round 1):</p> <p>a. It is noted that “no additional adjustment has been made to account for lower induced utilization” and that doing so would also require an “offsetting” adjustment to account for less favorable risk adjustment. Please clarify why it is believed that lower induced utilization would result in a less favorable risk adjustment transfer amount and provide any quantitative analysis that has been performed to justify that assertion.</p> <p>b. Please provide the estimated impact of benefit buy-downs on the proposed annual trend rate as discussed in your response to questions 1 and 4.</p>	<p>a. Over the past several years, the portion of our ACA-compliant small group membership enrolled in platinum products has steadily decreased, while the portion of membership enrolled in products corresponding to cheaper metal levels has steadily increased. Since the demographic and some diagnostic coefficients involved in the derivation of risk scores used to calculate annual risk adjustment transfer payments vary significantly between metal levels, the observed shift in enrollment mentioned above leads to a less favorable risk adjustment transfer payment. This shift in enrollment also leads to an implicit decrease in induced utilization. These two adjustments do not offset (inappropriate word choice in our Round 1 response). Further decreasing the Manual Base Period Allowed EHB claims PMPM would double-count the induced utilization adjustment, which is what we meant to convey in our response to question 4 of Round 1.</p> <p>b. We estimate that benefit buy-downs have a 1.5% impact on the observed annual trend.</p>
3	<p>Regarding your response to question 10 (of Round 1), it should be noted that the estimate provided by the PID labeled “estimated risk adjustment transfer amount” was not adjusted to reflect either changes in the statewide average premium between 2017 and 2019 or the 0.86 adjustment factor. Given that, please provide an estimate of what the projected 2019 risk adjustment transfer amount would be if these items were taken into account.</p>	<p>Incorporating the 0.86 adjustment factor and an adjustment for the statewide average premium decreases the projected risk adjustment transfer amount by 9.4%.</p>

2019 Business Rules Template v8.1

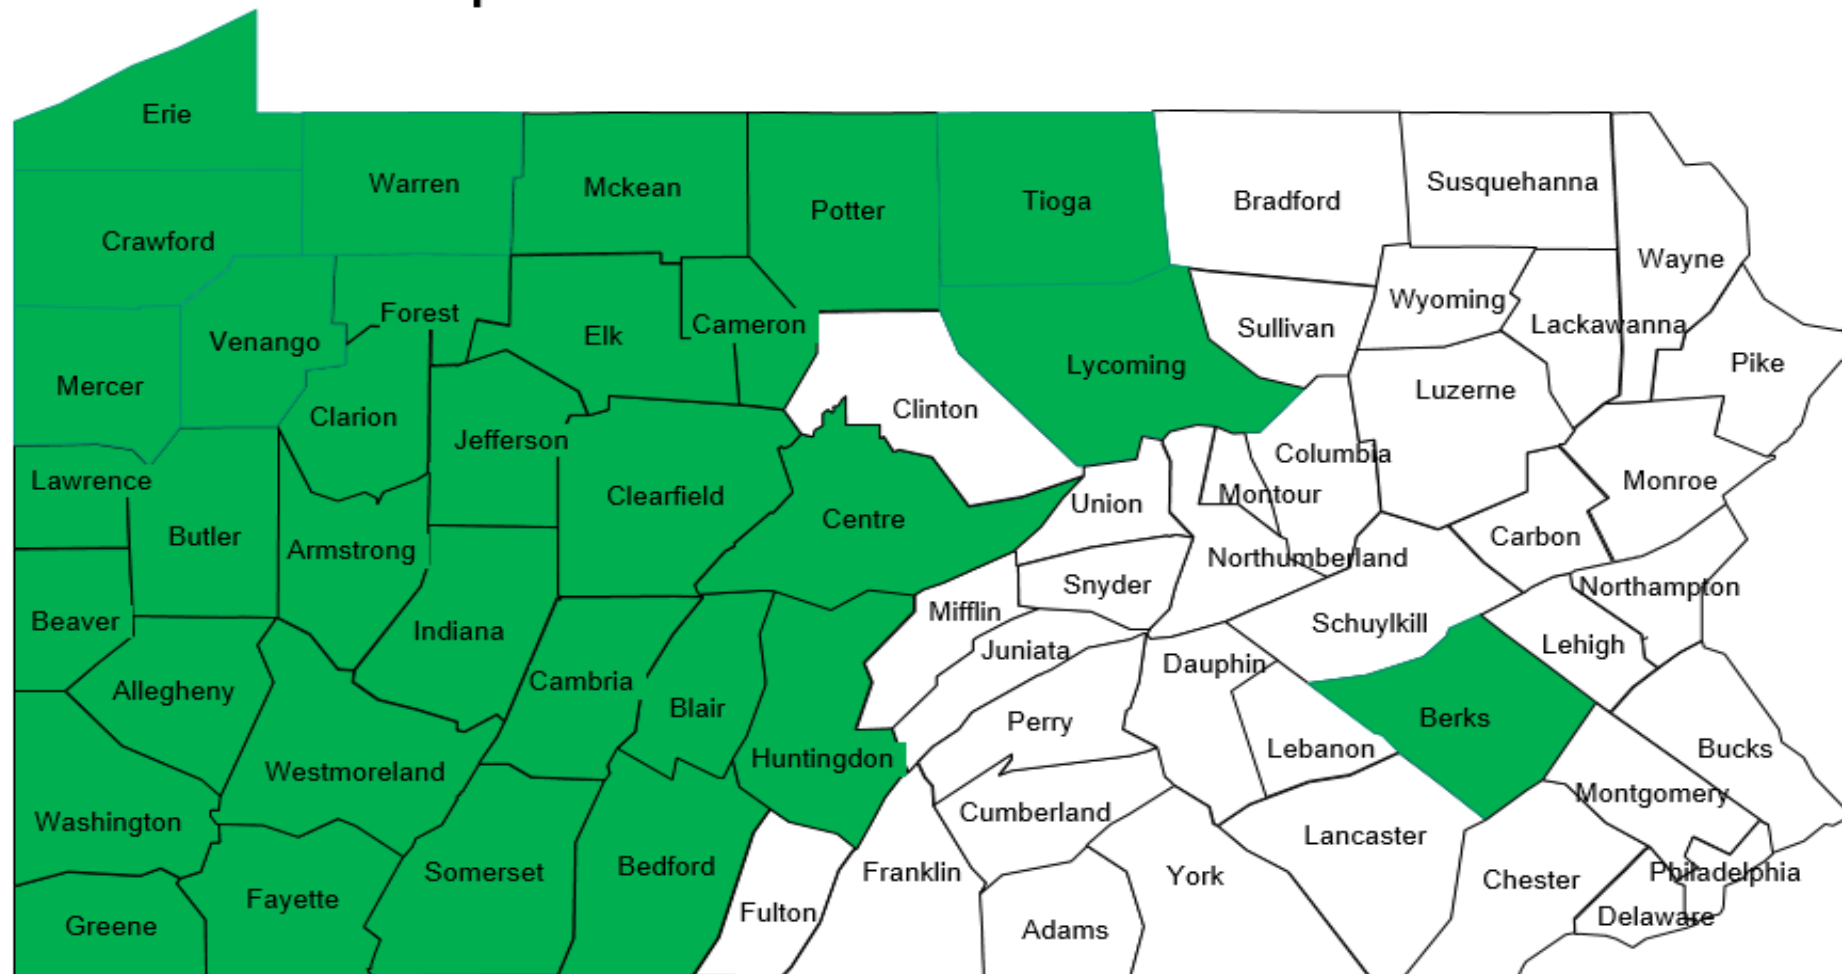

All fields with an asterisk (*) are required. To validate the template, press Validate button or Ctrl + Shift + I. To finalize the template, press Finalize button or Ctrl + Shift + F.
Enter the Issuer Rule on the first row (no Product ID or Plan ID).
For each Product rule, enter only the Product ID and the business rules that differ from the Issuer Rule.
For each Plan rule, enter only the Plan ID and the business rules that differ from the Product or Issuer Rule
