ANNUAL PERFORMANCE TEST

**Sale Management and Online Auction
Willoughby Sales**

<https://www.wlivestock.com/auction/29765>

Sale ends August 18, 2025 at 8:00 PM

Contact: 317-764-0185

*Thank you to the consignors and buyers of the Livestock Evaluation Center's
Performance Testing programs.*

For sale information visit:

<https://www.pa.gov/en/agencies/pda/animals/livestock-evaluation-center.html>

For more information, call 814.238.2527.

Suggested Care and Management

1. Rams are well developed and properly cared for and should adequately cover females.
2. Ram lambs should not be expected to breed more than 25 females in the first year. As they are still growing, give them grain and grass or quality hay.
DO NOT OVERWORK RAM LAMBS.
3. After placing a young ram with females, allow several weeks for the animal to adjust and begin servicing the flock.
4. Unfamiliar rams will fight when first introduced. If rams must be housed in the same pen, ensure it is small enough the animals can't gain enough momentum to hurt each other. Otherwise, placement in adjacent pens for several days before group housing should relieve this problem.
5. Ensure the success of your lamb crop by periodically checking to see if ewes are settling.
6. Keep the new ram around the barn or in a small lot for at least a week after arrival. This will allow him to rest from the trip and to become accustomed to his new surroundings.

General Information

1. MANAGEMENT OF THE RAMS

Participating rams have completed an official 77-day performance test at the Livestock Evaluation Center on July 19. Prior to the start of the tests, rams were allowed a 7-day adjustment period during which they were dewormed, introduced to the LEC ration, and prepared to begin the test. Throughout the performance tests, rams were self-fed a pelleted 16% protein feed. All animals received a mix grass/legume hay.

2. PERFORMANCE RECORDS

Individual performance records exist for each ram and buck cataloged. These records include:

- a. Average Daily Gain – weight gained over course of test divided by days on test
- b. Weight Per Day of Age – average weight gain per day since birth
- c. Loin Eye Area – ultrasonically scanned between the last two ribs, then adjusted based on finish weight specific to breed.
- d. Fat – measured ultrasonically, and to some degree indicates composition of gain.
- e. Ratio – The percent above or below average a ram or buck is within his own breed group for a particular trait. A ratio of 100 is average.

3. INDEX

Ram Index = (.35 x average daily gain ratio) + (.35 x final weight per day of age ratio) + (.15 x adjusted fat thickness value) + (.15 x adjusted loin eye muscle area value)

Animal's index divided by the average animal index within a breed provides the index ratio.

4. HEALTH

Participating rams are in very good health and can go anywhere. All rams have been examined for reproductive soundness, and all rams have been gene tested for the scrapie resistance gene. Semen has been collected from all senior rams and have passed minimum standards required by the American Society of Theriogenology.

5. The rams have been evaluated for performance, but potential buyers are responsible for evaluation of type, soundness, and breed character. All rams sell as is.

Health Procedure Summary

Rams upon admission to center

- Vitamin E and Selenium by injection
- Contagious Ecthyma (Soremouth) exposure
- Clostridium CD/Tetanus – 2nd dose given in May
- Rabies vaccine (Imrab®)
- Dewormed with Cydectin, Levamisol, Valbazen) May/July

End of test

- Physical exam for breeding soundness
- Sale rams fecal test negative
- Semen evaluation on fall-born rams

Fecal Egg Count Information

Parasite Resistance evaluation was performed on all Rams enrolled in the Pennsylvania Livestock Evaluation Center Ram Lamb Testing Programs for 2025. Parasite resistance to anthelmintics (dewormers) is a large problem for small ruminant producers. Farm losses due to parasites in small ruminants are significant. Current research has shown specific genetic lines are less susceptible to parasites. Selection of breeding stock which is less susceptible to parasites will benefit both the producer and the industry.

All sheep were dewormed prior to the start of the test. Animals were infected with a specific variety of *Haemonchus Contortus* (barber-pole worm) larvae which is sensitive to all classes of dewormer. Animals had fecal- egg count data taken from this infection on set dates through the test. Following final data collection, all animals were dewormed and reviewed by fecal egg count to be clear of the parasite. Fecal egg count data from the test is listed in the catalog to assist producers in selections of genetics.

Terms and Conditions of Sale

1. All payments must be made to WLivestock as the sale provider. No ram may leave the premises until payment has been received.
2. The auction services company will settle any disputes regarding bids that may arise. This decision will be final.
3. Certificates of registry will be furnished, and transfers will be made by the sale management, at the seller's expense, to the purchaser within a reasonable time after the sale. Registration certificates for any progeny of these sires are dependent upon the breed association.
4. All rams are at the seller's risk until sold and will be the buyer's risk as soon as sold. Rams sold can be picked up by scheduling an appointment with the Livestock Evaluation Center- 814-238-2527. Ewes must be scheduled for pick up with the consignor at the consignors residence. Rams will be cared for up to a maximum of 1.5 weeks after the sale at the buyer's risk. After 1.5 weeks there will be a nominal fee.
5. Certificates of Veterinary Inspection will be furnished by the Pennsylvania Department of Agriculture for rams.
6. All rams are guaranteed breeders by the sellers, providing they are properly cared for and not exhibited on the show circuit prior to being used for breeding. Any ram that settles one third of the healthy females he services will be considered a breeder. In the event a ram is thought to be a non-breeder by the buyer, he may be returned to the seller at the buyer's expense within six months of the sale date. In the case of a ram claimed to be a non-breeder, the seller is entitled to the period of time, following return of the ram, required to take him through the next regular breeding season, in which to demonstrate that the ram is a breeder. If in that time the ram proves a non-breeder,

then refunding of the purchase price shall be considered full settlement. Other procedures for settlement may be taken if satisfactory to both the buyer and the seller.

7. The above guarantee and terms of the sale shall constitute a contract between the buyer and the seller for each ram sold and shall be equally binding upon both. The Pennsylvania Department of Agriculture, Pennsylvania State University, Pennsylvania Sheep and Wool Growers Association, test sale management or any other person or organization connected with the management of the sale do not assume liability, legal or otherwise, except to help make any needed adjustments.
8. All persons attending the sale do so at their own risk. Neither the Pennsylvania Department of Agriculture, nor any other person or organization connected with the sale will assume liability, legal or otherwise, for the safety in the buildings, on the premises or in behavior of the animals.

Scheduling Ram Viewing

Rams can be viewed by appointment prior to the sale via scheduling with LEC staff-814-238-2527

Directions

The center is between Pine Grove Mills and the Ag Progress Days site, approximately nine miles southwest of State College on PA Route 45.
