

PROJECT SCHEDULE

Lemoyne Bottleneck Improvements

The Lemoyne Bottleneck Design Team is coordinating with on-going projects

1

Norfolk Southern is in final design to reconstruct their central railroad bridge and remove the western railroad bridge deck along Market Street’s main curve, which provided some additional design space in the development of roadway alternatives.

2

PennDOT is in final design for the independent Market Street Bridge Project, which includes improved multi-modal facilities on the main bridge and on top of a new downstream utility bridge. The Bottleneck improvements will connect to these multi-modal facilities at the Front and Market Street intersection.
