Five-Year Economic Experience Review

Prepared as of June 30, 2020

August 5, 2021

Disclosures

The information contained herein is developed for the Board of Trustees and Staff of PSERS by Buck Global, LLC using generally accepted actuarial principles and techniques in accordance with all applicable Actuarial Standards of Practice (ASOPs). The purpose of this presentation is to provide key results of the June 30, 2020 five-year experience study. All recommendations contained in this report are consistent with each other, as appropriate.

Use of this presentation for any other purpose, or by anyone other than the Board of Trustees or the staff of PSERS, may not be appropriate and may result in mistaken conclusions because of failure to understand applicable assumptions, methods, or inapplicability of the presentation for that purpose. Buck should be asked to review any statement to be made on the basis of the results contained herein. Buck will accept no liability for any such statement made without prior review by Buck. No third party recipient of Buck's work product should rely upon Buck's work product absent involvement of Buck or without our approval.

The material contained herein is based on member and financial data, actuarial assumptions and methods, and System provisions applicable for the June 30, 2020 experience investigation of the Pennsylvania Public School Employees' Retirement System.

Where presented, references to "funded ratio" and "unfunded accrued liability" are measured on an actuarial value of assets basis. It should be noted that the same measurements using market value of assets would result in reduced funded ratios and increased unfunded accrued liabilities. Moreover, the funded ratios presented are appropriate for evaluating the need for and level of future contributions but provide no indication of the funded status of the System if the System were to settle (i.e., purchase annuities to cover) a portion or all of its liabilities.

See page 45 for a discussion of models used in calculating the results shown in this presentation.

Future actuarial measurements may differ significantly from current measurements due to System experience differing from that anticipated by the economic and demographic assumptions, increases or decreases expected as part of the natural operation of the methodology used for these measurements, and changes in System provisions or applicable law. An analysis of the potential range of future results is beyond the scope of this study.

David L. Driscoll is a Fellow of the Society of Actuaries and a Member of the American Academy of Actuaries. Edward Quinn and Salvador Nakar are Members of the American Academy of Actuaries. We meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein. We are available to answer any questions on the material contained herein, or to provide explanations or further details as may be appropriate.

Experience Review

Section 8502(j) of the Retirement Code provides that in every five-year period, the actuary of the System is to make an actuarial investigation and evaluation of the mortality, service and compensation experience of the members and beneficiaries covered under the System during the preceding five years.

- This report presents the results of the System's economic experience review for the five-year period July 1, 2015 through June 30, 2020
 - Investment Return
 - Inflation
 - Individual Salary Increases
 - Payroll Growth
 - Administrative Option Factors
- Buck presented and the Board approved the results of the demographic experience review for the five-year period July 1, 2015 through June 30, 2020:
 - March 4, 2021 Budget/Finance Committee meeting
 - Withdrawal
 - Retirement
 - Disability
 - Withdrawal Annuity Benefit Commencement
 - Optional Forms of Payment Elections
 - June 10, 2021 Budget/Finance Committee meeting
 - Mortality
- Cost analysis related to the economic experience review is based on the Board-approved results of the demographic experience review

Cost Impact of Demographic Assumption Changes

Item	June 30, 2020 Actuarial Valuation

TOTAL DEMOGRAPHIC CHANGES	\$ 357 Mil	(0.2)%	(0.81)%	(0.63)%	\$ (90) Mil
AFTER REFLECTING CHANGES	\$45,391 Mil	59.0%	6.39%	33.36%	\$ 4,767 Mil

1. Actuarial value of assets basis.

2. Without regard to the Act 5 DC contribution and Premium Assistance.

3. Based on the fiscal year 2022 appropriation pay of \$14,289,000,000.

4. The cost effect of each proposed assumption is subject to change depending on the sequence of recognized assumptions.

In addition, the changes in demographic assumptions would decrease the Premium Assistance contribution rate for fiscal year 2021/2022 from 0.80% to 0.78%.

Payroll Growth

- The amortization of the System's unfunded accrued liability uses a level percentage of payroll method which produces a payment stream that is designed to increase based on the expected growth in payroll
 - The current assumption is 3.5% per annum
 - If the actual payroll used to determine employer contributions:
 - Is less than the anticipated amount based on a 3.5% payroll growth, results in under-contribution
 - Is greater than the anticipated amount based on a 3.5% payroll growth, results in over-contribution

Payroll Growth

- Actual experience
 - Over the study period

Increase in Total Payroll	4.71%	3.39%	-0.15%	1.82%

- Payroll growth was impacted by the Great Recession
 - The most recent 5-year period bounced back after the impact of the Great Recession
- Based on salary surveys from employers, PSERS staff is anticipating a 3.5% growth in payroll for fiscal year ending 2022 and an estimated 2.5% thereafter. Recent increase in charter school payrolls.
- The uncertainty of the pandemic effect
 - Triggered a lot of people to leave teaching
 - Created labor shortages in areas like teachers of specialty subjects, food service and transportation

Payroll Growth

- The payroll growth assumption is related to the assumed Rate of Investment Return through the common element of the inflation component

Consideration of Risk

- ASOP 51 risk - actual future measurements deviating from expected future measurements due to actual experience deviating from actuarial assumptions
- Experience studies attempt to mitigate this risk by re-evaluating the actuarial assumptions compared to past experience on a regular basis
 - Use combination of past experience, future expectations and professional judgement
- Demographic experience study addresses the risk that actual demographic experience will be different than assumed
 - Longevity risk – Members living longer than assumed increases costs
 - Mortality assumption addresses this risk
 - Risk due to option 4 withdrawal of accumulated deductions at retirement - more retirees are electing a lump sum than assumed
 - Possible liquidity issues increasing investment risk
 - For Class T-C and T-D difference in interest versus investment return rate presents an additional liability
 - Retirement risk - more retirees commencing their benefits earlier than assumed generally increases costs
 - May pay out subsidized early and superannuation benefits for a longer period of time than assumed
 - May be offset some by lower accrued benefits at retirement due to lower salary and service at retirement than assumed
 - Withdrawal prior to retirement risk – fewer members withdrawing than assumed generally increases the costs
- Contribution risk – actuarial assumptions out of line with actual experience may create losses that make contributions more volatile and expensive at times when the System sponsor is less able to afford the costs. This increases the risk of not contributing an actuarially determined contribution.

Use of Models

Actuarial Standard of Practice No. 56 (“ASOP 56”) provides guidance to actuaries when performing actuarial services with respect to designing, developing, selecting, modifying, using, reviewing, or evaluating models. For this presentation Buck used the following:

- internally developed and third party model to compare actual versus assumed experience and determine proposed assumptions to use for valuing the liabilities in the third-party software
- third-party software to calculate the liabilities associated with the System based on current and proposed assumptions
- an internally developed model that applies applicable funding methods and policies to the liabilities derived from the output of the third-party software and other inputs, such as plan assets and contributions, to determine the contribution rates and funded ratios

Buck has an extensive review process for annual valuations whereby the results of the liability calculations are checked using detailed sample output, changes from year to year are summarized by source, and significant deviations from expectations are investigated. Other outputs and the internal model are similarly reviewed in detail and at a high level for accuracy, reasonability and consistency with prior results. The models used for annual valuations are used for this presentation and any adaptations for this presentation are checked and reviewed by experts within the company who are familiar with applicable funding methods as well as the manner in which the model generates its output. If significant changes are made to the internal model, extra checking and review are completed.

Disclosures

Unless otherwise stated, the following cost projections were prepared using the same data, methods and actuarial assumptions that were used for the June 30, 2020 actuarial valuation and the following assumptions for future valuations:

1. The active workforce size is assumed to remain constant over the projection period;
2. Future new employees have similar characteristics (age/gender/salary) to new employees for the period July 1, 2017 through June 30, 2020. Among new school employees hired on or after July 1, 2020, 98% will become Class T-G members, 1% will elect Class T-H membership, and 1% will elect Class DC participation.

The cost projections reflect the ACT 5 risk-sharing provisions for TE/TF/TG/TH members. We caution that while the System assets and projected unfunded accrued liability amortization schedules reflect the over contribution from the basic member rate, the corresponding System accrued liabilities do not reflect the increase in the affected members contribution rates. Changes in the member rate influence the System's total liabilities due to incidence of return of contributions for non-vested members, Option 4 lump sum withdrawals, etc.

The resulting contributions for each fiscal year may be different from actual results that will be determined in future actuarial valuations due to demographic and financial experience different than assumed. In addition, it is outside the scope of this assignment to determine if the assumptions used in the June 30, 2020 actuarial valuation are reasonable for future valuations. Accordingly, these results should not be used for any purpose other than providing the user with an estimate of future employer pension cost obligations based on the parameters defined by the user.

Where presented, references to "funded ratio" and "unfunded accrued liability" are to measurements made on the basis of the actuarial value of assets. It should be noted that the same measurements made using the market value of assets would result in different funded ratios and unfunded accrued liabilities. Moreover, the funded ratios presented are appropriate for evaluating the need for and level of future contributions but provide no indication of the funded status of the plan if the plan were to settle (i.e., purchase annuities to cover) a portion or all of its liabilities.

Unless otherwise stated, graphical presentations assume a fiscal year ending 2021 20.0% return on market value of assets and the assumed annual rate of return thereafter.
